1 I. INTRODUCTION AND QUALIFICATIONS

2  
3 Q. PLEASE STATE YOUR NAME.

4 A. My name is Mark A. Hervey.

5  
6 Q. BY WHOM ARE YOU EMPLOYED AND WHAT IS YOUR POSITION?

7 A. I am the Manager of Jurisdictional Revenue Analysis for Xcel Energy Services  
8 Inc.

9  
10 Q. FOR WHOM ARE YOU TESTIFYING?

11 A. I am testifying on behalf of Northern States Power Company doing business  
12 as Xcel Energy ("Xcel Energy" or the "Company").

13  
14 Q. PLEASE SUMMARIZE YOUR QUALIFICATIONS AND EXPERIENCE.

15 A. I received my MBA from the University of St. Thomas in 1983. Over the last  
16 30 years, my primary responsibilities have been to perform electric and gas  
17 revenue requirements analysis for Northern States Power Company and  
18 subsequently Xcel Energy. Currently, I conduct special revenue analysis  
19 studies, prepare revenue requirement information for miscellaneous  
20 regulatory filings, and consult on jurisdictional revenue requirement issues. I  
21 am also responsible for developing long-range electric and gas rate impact  
22 studies and providing revenue requirements and economic analyses for use in  
23 various Xcel Energy jurisdictions. My resume is included as  
24 Exhibit\_\_\_(MAH-1), Schedule 1.

25  
26 Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

1 A. I present the incremental impact on Minnesota electric rates of the MEP-I  
2 LLC ("Mesaba 1 LLC") purchased power agreement ("Mesaba 1 PPA"). This  
3 rate impact reflects the generation-related costs of the Mesaba 1 PPA, the  
4 impact that PPA would have on Xcel Energy's capital structure, and an  
5 estimate of the transmission-related costs of delivering the output of Mesaba  
6 Unit 1 to Xcel Energy's system.

## 8 II. REVENUE REQUIREMENT DEVELOPMENT

9  
10 Q. PLEASE EXPLAIN HOW YOU ESTIMATED THE INCREMENTAL RATE IMPACT OF  
11 THE MESABA 1 PPA.

12 A. Overall, my analysis compares the revenue requirements associated with the  
13 Mesaba 1 PPA with the revenue requirements for Xcel Energy under its  
14 approved Resource Plan. By comparing the streams of revenue requirements  
15 necessary to implement the PPA with those necessary to implement the  
16 Company's approved Resource Plan, I am able to isolate the incremental rate  
17 impact of the Mesaba 1 PPA in any given year. I chose the year 2012 to  
18 compare the revenue requirements because that is the first full year of the  
19 Mesaba 1 PPA.

20  
21 Q. WHAT STEPS ARE INVOLVED WITH DETERMINING THE REVENUE  
22 REQUIREMENTS ASSOCIATED WITH THE MESABA 1 PPA AND THE APPROVED  
23 RESOURCE PLAN?

24 A. Determining the rate impacts of the Mesaba 1 PPA and the approved  
25 Resource Plan involved the following steps:

- *Determine generation revenue requirements.* To determine the generation-related revenue requirements associated with the Mesaba 1 PPA, I used the annual generation investment revenue requirement, fuel, purchased power, and generation operating and maintenance (“O&M”) costs of the Mesaba 1 PPA prepared by Ms. Elizabeth M. Engelking. The generation investment revenue requirement is made up of debt and common equity return requirements, plus depreciation expense, plus income taxes (current and deferred) and property taxes. I added the annual generation investment revenue requirement, fuel, purchased power, and generation-related O&M expenses to arrive at the total annual generation revenue requirements associated with the Mesaba 1 PPA. I used the Company’s approved jurisdictional allocation factor for generation costs to allocate the appropriate portion of the total Mesaba 1 PPA generation revenue requirements to Minnesota.

I followed the same process to calculate the total annual generation revenue requirements for our approved Resource Plan, using the cost information prepared by Ms. Engelking. The difference in revenue requirements of these two alternatives represents the incremental, generation-related cost impact of the Mesaba 1 PPA. This is the first of three incremental cost components associated with the higher cost Mesaba 1 PPA.

- *Determine the cost of the Mesaba 1 PPA’s impact on Xcel Energy’s capital structure.* Mr. George E. Tyson II and Mr. Marvin E. McDaniel testify as to the financial impacts of implementing the Mesaba 1 PPA.

1 Mr. Tyson provides an estimate of the increased costs Xcel Energy  
2 would incur to adjust its capital structure to accommodate the imputed  
3 debt that would result from the PPA's implementation. To reflect this  
4 impact in my rate analysis, I compared the costs associated with the  
5 higher common equity ratio required with the Mesaba 1 PPA to the  
6 costs associated with the lower common equity ratio of the approved  
7 Resource Plan. To do so, I first developed a rate base conversion  
8 factor for each capital structure. When applied to a particular rate base,  
9 this factor yields the revenue requirements (return and income taxes)  
10 for that rate base. Next I subtracted the Resource Plan's lower rate  
11 base conversion factor from the Mesaba 1 PPA's higher rate base  
12 conversion factor to determine the incremental difference in the  
13 factors. I then applied this incremental difference in factors to a  
14 forecast of the Minnesota rate base for each year from 2007 to 2033 to  
15 arrive at the incremental revenue requirements of the higher cost  
16 capital structure associated with the Mesaba 1 PPA. The higher  
17 revenue requirements resulting from the PPA's higher capital structure  
18 costs represent the second incremental cost component of the Mesaba  
19 1 PPA.

- 20
- 21 • *Determine the incremental transmission costs.* In his testimony, Mr.  
22 Richard Gonzalez estimates the costs of delivering the base load  
23 capacity to Xcel Energy's system under both the Mesaba 1 PPA and  
24 the approved Resource Plan. Mr. Dean E. Schiro discusses how the  
25 costs for either scenario would be recovered. For simplicity, I used the  
26 entire network upgrade costs estimated by Mr. Gonzalez and the  
27 portion of interconnection costs identified by Mr. Schiro for each

1 scenario. To estimate the net rate impact of this additional  
2 transmission, I then determined the revenue requirements associated  
3 with the needed transmission investments under both the Mesaba 1  
4 PPA and approved Resource Plan scenarios, and netted the difference.  
5 The higher transmission costs associated with the Mesaba 1 PPA  
6 represents the third incremental cost component reflected in my rate  
7 analysis.

- 8
- 9 • *Convert Mesaba 1 PPA revenue requirements to a change in retail rates.*  
10 I added the incremental, Minnesota-jurisdiction revenue requirements  
11 for the Mesaba 1 PPA's generation, capital structure, and transmission  
12 costs together, and then expressed this sum as a percentage change in  
13 Minnesota retail rates. To do so, I divided this total incremental  
14 revenue requirement by projected Minnesota retail revenues, using our  
15 current forecast of Minnesota electric revenue through 2011, and a  
16 two-percent escalation factor for the years beyond. The percentage  
17 difference between the total incremental revenue requirement of the  
18 Mesaba 1 PPA and Minnesota revenues represents the overall  
19 percentage rate impact of implementing the Mesaba 1 PPA.

20

21 Q. DID YOU PERFORM ANY OTHER RATE IMPACT ANALYSIS?

22 A. Yes. I performed this analysis for the various cost scenarios identified by Ms.  
23 Engelking to provide a range of possible rate impacts. In addition, I  
24 translated the 2012 rate impact (the first full year of the PPA) into a monthly  
25 bill increase for both a typical residential and a representative  
26 commercial/industrial customer.

1 Q. DOES YOUR RATE ANALYSIS CONSIDER POSSIBLE RATE INCREASES OTHER  
2 THAN THE INCREMENTAL INCREASES THAT WOULD RESULT FROM THE  
3 MESABA 1 PPA?

4 A. No. I based my analysis solely on the incremental impact of the Mesaba 1  
5 PPA because I sought to identify the change in rates associated with the PPA  
6 separate from any other expected rate changes. Implementation of the  
7 Resource Plan, which serves as the basis of comparison for the costs of the  
8 PPA, will result in increased rates to reflect the costs of meeting increased  
9 customer needs through initiatives such as our Metropolitan Emissions  
10 Reduction Project. Thus, my analysis identifies the rate impact over and  
11 above the rate increases already expected under our approved Resource Plan.  
12

### 13 III. RATE IMPACTS

14

15 Q. USING THE RANGE OF COSTS DEVELOPED BY MS. ENGELKING, WHAT IS THE  
16 INCREMENTAL RATE IMPACT OF THE MESABA 1 PPA?

17 A. My analysis indicates that Minnesota revenue requirements would increase by  
18 \$250 million to \$365 million, resulting in electric rate increases in the range of  
19 5.9 to 9.6 percent due to the Mesaba 1 PPA in 2012, the first full year of the  
20 PPA. This increase converts to monthly bill increases of approximately \$5.00  
21 to \$7.50 per month for an average residential customer (750 kWhs per  
22 month). A representative commercial/industrial customer (400,000 kWh per  
23 month, with a 1000 kW demand at a 54.8 percent load factor) would see bill  
24 increases ranging from approximately \$2,700 to \$3,900 per month. These  
25 amounts would be incremental additions to rate increases already anticipated  
26 in 2012 under the approved Resource Plan. I show a summary of these  
27 results in Table 1 below.

Table 1

| Mesaba 1 PPA<br>Incremental 2012 Revenue Requirements and Rate Impact |  |                                  |
|---|--|----------------------------------|
|   | Total Incremental Revenue<br>Requirements<br>(\$000) | Total Incremental<br>Rate Impact |
| Low Range Scenario  | +\$250,589   | +5.9%                            |
| High Range Scenario   | +\$365,157   | +9.6%                            |

Exhibit\_\_\_(MAH-1), Schedules 2 and 3 show the results of my rate impact analysis in detail, while Exhibit\_\_\_(MAH-1), Schedules 4 and 5 contain the calculation of the representative bill increases.

Q. PLEASE DISCUSS THE BASIS FOR YOUR CALCULATED RANGE OF INCREMENTAL RATE INCREASES ASSOCIATED WITH THE MESABA 1 PPA.

A. I have calculated the rate impacts associated with the range of possible cost changes presented in Ms. Engelking's testimony. In doing so, I held the capital structure and transmission cost impacts constant across all scenarios.

Q. HAVE YOU CALCULATED AN INCREMENTAL RATE IMPACT USING MESABA 1 LLC'S ESTIMATED PPA COSTS?

A. Yes. If the actual costs of the Mesaba 1 PPA were to reflect Mesaba 1 LLC's proposed costs, the total of these costs and the transmission and capital structure costs discussed earlier would increase rates incrementally in 2012 by \$270 million, a 6.5 percent increase over the approved Resource Plan. This increase converts to a bill impact of approximately \$5.50 per month for an average residential customer (750 kWhs per month) and approximately \$2900

per month for a representative commercial industrial customer (400,000 kWhs per month, with 1000 kW demand at a 54.8% load factor). I show a summary of these results in Table 2 below.

Table 2

| Mesaba 1 PPA<br>Incremental 2012 Revenue Requirement and Rate Impact<br>Compared to the Approved Resource Plan<br>Using Mesaba 1 LLC Estimated Generation Costs<br>(\$000) |                                |                        |  |                            |
|--|--------------------------------|------------------------|--|----------------------------|
| Generation<br>Impact   | Capital<br>Structure<br>Impact | Transmission<br>Impact | Total Revenue<br>Requirement<br>Impact | Incremental<br>Rate Impact |
| +\$202,283   | +\$39,900                      | +\$27,492              | +\$ 269,675                            | +6.5%                      |

Included with my testimony is Exhibit\_\_\_(MAH-1), Schedule 6, which shows the results of my rate impact analysis in detail, and Exhibit\_\_\_(MAH-1), Schedule 7, which shows the calculation of the representative bill increases.

Q. DO YOUR ESTIMATED RATE IMPACTS REMAIN CONSTANT OVER TIME?

A. No. The incremental rate impact of the Mesaba 1 PPA would decline over time, as costs are added under the approved Resource Plan to meet growing customer needs. The results presented here represent the first-year impacts of the PPA. The detailed schedules in my Exhibit on the Mesaba 1 PPA's incremental rate impacts show those impacts over the term of the PPA. The schedules on the increase in customer bills show the increases for 2012, the first full year of the PPA.

#### IV. CONCLUSION

Q. PLEASE SUMMARIZE YOUR TESTIMONY.

1 A. I estimate that the Mesaba 1 PPA would increase rates by a range of 5.9 to 9.6  
2 percent in 2012, the first full year of the PPA. This increase would be over  
3 and above the rate increases already anticipated under our approved Resource  
4 Plan. Accepting Mesaba 1 LLC's cost estimates for the PPA, 2012 rates would  
5 be 6.5 percent higher than those under the Resource Plan.

6  
7 Q. DOES THIS CONCLUDE YOUR TESTIMONY?

8 A. Yes, it does.

Mark A. Hervey  
Manager, Jurisdictional Revenue Analysis  
Xcel Energy  
414 Nicollet Mall  
Minneapolis, MN

---

#### CURRENT RESPONSIBILITIES

Responsible for special revenue analysis studies, preparing revenue requirement information for miscellaneous filings, and consulting on jurisdictional revenue requirements issues. Also responsible for developing long range electric and gas rate case studies for the Revenue Requirements Department. Provide revenue requirements and economic analysis to jurisdictional leaders as requested.

#### EXPERIENCE

|  |              |
|--|--------------|
