Quick question - when we were running the GOEA numbers for Black Oak yesterday, why did we change this line

AddTot<-TRUE #Add strata for total (TRUE) or not (FALSE)

to this?

AddTot<-FALSE #Add strata for total (TRUE) or not (FALSE)

Thanks - and thanks again for all your help. I really am getting the hang of R, I promise.

Hey Mags,

When you switched to the GOEA run, there was only one 'season' (aka strata), which was the time of year when you expected GOEA might have some chance of being present. The AddTot<-TRUE or AddTot<-FALSE line just tells R to either add the strata or to not add them... if you only have 1 strata, then there's no need to add it.

Yep, yep!

Let me know if you run into anything else...

Hey, I do think it would be worth bringing the GOEA (rare but possible occurrence) issue to the EPPIT if you're up for it.
