RE: PETITION  
2022-2024 TRIENNIAL NUCLEAR PLANT DECOMMISSIONING STUDY &  
ASSUMPTIONS  
DOCKET No. E002/M-20-\_\_\_\_

Dear Mr. Seuffert:

Northern States Power Company, doing business as Xcel Energy, submits a Petition for approval of our 2022-2024 Triennial Nuclear Decommissioning Study & Assumptions, along with supporting materials.

We have electronically filed this Petition and supporting materials with the Minnesota Public Utilities Commission, and copies have been served on the parties on the attached service list. In addition, a one-page summary of the filing has been provided to persons on the attached service lists. The one-page summary provided also contains directions on how to access an electronic copy of the full filing via the Commission's website. Please contact me at (612) 330-6270 or [allen.krug@xcelenergy.com](mailto:allen.krug@xcelenergy.com) or Laurie Wold at (612) 330-5510 or [laurie.j.wold@xcelenergy.com](mailto:laurie.j.wold@xcelenergy.com) if you have any questions regarding this filing.

Sincerely,

/s/

ALLEN D. KRUG

IN THE MATTER OF THE PETITION OF  
NORTHERN STATES POWER COMPANY  
FOR APPROVAL OF THE 2022 - 2024  
TRIENNIAL NUCLEAR  
DECOMMISSIONING STUDY &  
ASSUMPTIONS

DOCKET No. E002/M-20-\_\_\_\_\_

**PETITION**

### OVERVIEW

Pursuant to Minn. Stat. § 216B.11 and § 216B.2445 and Minn. R. 7825.0500 through 7825.0800, and prior Minnesota Public Utilities Commission (Commission) Orders, Northern States Power Company, doing business as Xcel Energy (Company), submits our Petition for approval of the 2022-2024 Nuclear Decommissioning Study and Assumptions.

The objective of a decommissioning docket is to arrive at a reasonable cost estimate for decontamination and removal of nuclear facilities at the end of their operating lives and to set an accrual to accumulate funds sufficient to pay those decommissioning costs. To meet that objective, in this Petition, we propose a change to our annual accrual designed to result in the accrual of funds necessary to decommission the Company's nuclear fleet.

This triennial filing is unique in two ways. First, it follows our June 2020 Supplemental Filing to the 2019 Integrated Resource Plan (2019 IRP Supplement) in Docket No. E002/RP-19-368, in which we discuss the Company's long-term carbon reduction goals. In particular, our Preferred Plan in the 2019 IRP Supplement includes a 10-year extension of our license to operate the Monticello plant, moving the planned retirement date from 2030 to 2040. If approved, this extension would affect our accrual calculation by extending the time for collecting an accrual during the plant's operation while allowing the Nuclear Decommissioning Trust (NDT) to earn returns during the 10 additional years of operation. Because the extension has

not yet been approved, however—and recognizing there are many regulatory hurdles both at the state and federal levels required for extending operation of the Monticello plant—we have analyzed, but do not propose, potential accruals that account for the extended operation.

Second, this filing follows the decision on our 2020 Stay Out Request.<sup>1</sup> In that docket, the Commission authorized the Company to defer the increase in the accrual that arose out of the 2017 Nuclear Decommissioning Trust Triennial filing (2017 Filing)<sup>2</sup> from January 1, 2020 to January 1, 2021. It also is being filed shortly after the Company filed its 2020 Multi-Year Rate Plan (MYRP),<sup>3</sup> and prior to the Commission's consideration of our 2021 Rate Case Stay Out Request.<sup>4</sup> If the 2021 Stay Out Request is approved (and the MYRP is withdrawn), any increase to the NDT accrual arising out of the 2017 Filing would be postponed until January 1, 2022. (As noted in our November 2, 2020 Reply Comments in Docket No. E002/M-20-743, a one-year delay in increasing the accrual from its current \$14 million level would increase the accrual proposed in this Petition by only \$1.28 million annually.) If the 2021 Stay Out Request is not approved and the MYRP proceeds, we would update the MYRP for the NDT changes in Rebuttal Testimony.

In compliance with the Commission's January 7, 2019 Order on our 2017 Nuclear Decommissioning Trust Triennial filing (2017 Filing) in Docket No. E002/M-17-828, we have analyzed several decommissioning scenarios and calculated a number of different accruals as part of this filing. The resulting range of possible changes to the accrual runs from an \$8.6 million decrease to a \$207.5 million increase. However, in general, when compared to the 2017 Filing and using the same assumptions regarding decommissioning alternatives and operating lives, calculated accruals have increased modestly. For example, if we assume that immediate decommissioning will occur following the end of each current plant license (consistent with our 2014 and 2017 Filings), the accrual for 2022 would increase from \$27.4 million to approximately \$31.4 million.

As discussed below—absent other material intervening events—we believe it is appropriate to increase the accrual to \$31.4 million beginning in 2022. Specifically,

---

<sup>1</sup> See Commission's March 13, 2020 ORDER in Docket No. E002/M-19-688.

<sup>2</sup> See Commission's January 7, 2019 ORDER in Docket No. E002/M-17-828.

<sup>3</sup> IN THE MATTER OF XCEL ENERGY'S APPLICATION FOR AUTHORITY TO INCREASE ELECTRIC RATES, Docket No. E002/GR-20-723 (November 2, 2020).

<sup>4</sup> PETITION FOR APPROVAL OF 2021 TRUE-UP MECHANISMS, Docket No. E002/M-20-743 (October 1, 2020). Note: The Company's 2021 Stay Out Request was initially filed on September 15, 2020, as part of the Company's Response and Petition in the COVID-19 Relief & Recovery dockets (Docket Nos. E,G999/CI-20-492; E,G002/M-20-716). On October 1, 2020 it was given its own docket – Docket No. E002/M-20-743.

the long-term real interest rates (Treasury rate in excess of average future inflation, measured by the rate on Treasury Inflation Protection Securities (TIPS) ) is a fundamental building block for the forward-looking return forecast. That rate is lower today than it was in 2017 as a result of a decline in real interest rates. As a result, our current projections show lower long-term investment growth in the future than our projections in the 2017 Filing. This change in our projections is consistent with the investment industry as a whole. Given the very long duration of the NDT and decommissioning process, even modest changes in forward-looking expected return assumptions can have a substantial effect on the accrual. For these reasons, we believe increasing the accrual is appropriate and reasonable.

Based on the above, the Company respectfully requests the Commission:

- Approve our decommissioning study and assumptions as compliant with the Company's obligations under Minnesota statutes, Commission rules, and prior precedent;
- Approve an accrual of \$31,368,901 effective in 2022 to meet the needs of the Company's 60-year spent fuel scenario, with no recasking of the fuel, for 2022 through 2024 while strategic decisions about the future of our nuclear units are decided in our 2019 IRP;
- Approve an annual accrual of \$0.7 million for end-of-life (EOL) nuclear fuel for the calendar year 2022 through 2024; and
- Approve the current asset allocation for the NDT.

Our Petition is organized as follows:

Sections I through IV – *General filing information*

- V. COMPANY PROPOSAL
- VI. REQUIRED DECOMMISSIONING INFORMATION
  - A. Scenarios Evaluated
  - B. Primary Factors Changed Since 2017 Filing
  - C. Trust Structure & Investment Strategy
  - D. Current Fund Balances
- VII. EFFECT OF CHANGE UPON THE COMPANY'S REVENUE
- VIII. EOL NUCLEAR FUEL
- IX. PREMATURE RISK INVESTIGATION
- X. ASSET RETIREMENT OBLIGATION

## Supporting Schedules

H	Premature Risk Investigation
I	Asset Retirement Obligation
J	Decommissioning Cost Analysis for the Monticello Nuclear Generating Plant
K	Decommissioning Cost Analysis for the Prairie Island Nuclear Generating Plant
L	Decommissioning Cost Analysis for the Monticello Nuclear Generating Plant with a 10-year Operating Life Extension

### I. SUMMARY OF FILING

A one-paragraph summary of the filing accompanies this Petition pursuant to Minn. R. 7829.1300, subp. 1.

### II. SERVICE ON OTHER PARTIES

Pursuant to Minn. Stat. § 216.17, subd.3, the Company has electronically filed this document. A summary of the filing has been served on all parties on the attached service list.

### III. GENERAL FILING INFORMATION

Pursuant to Minn. R. 7825.3200, 7825.3500, and 7829.1300, subp. 3. the Company provides the following required information:

#### A. Name, Address, and Telephone Number of Utility

Northern States Power Company  
Xcel Energy  
414 Nicollet Mall  
Minneapolis, MN 55401  
(612) 330-5500

**B. Name, Address, and Telephone Number of Utility Attorney**

Matt B. Harris  
Lead Assistant General Counsel  
Xcel Energy  
414 Nicollet Mall, 401 – 8<sup>th</sup> Floor  
Minneapolis, MN 55401  
(612) 330-7641

**C. Date of Filing**

This Petition is being filed on December 1, 2020.

**D. Statute Controlling Schedule for Processing the Filing**

Under Minn. R. 7829.0100, subp. 11, this request for approval of decommissioning accrual is a “miscellaneous” filing because no determination of the Company’s general revenue requirements is necessary. There is no specific statute that prescribes the amount of time the Commission has to rule on this Petition.

**E. Utility Employee Responsible for the Filing**

Allen D. Krug  
A.V.P. of Minnesota State Regulatory Policy  
Xcel Energy  
414 Nicollet Mall, 401 – 7<sup>th</sup> Floor  
Minneapolis, MN 55401  
(612) 330-6270

**IV. MISCELLANEOUS INFORMATION**

Pursuant to Minn. R. 7829.0700, subpt. 2, the Company requests that the following persons be placed on the Commission’s official service list for this matter:

Matt B. Harris  
Lead Assistant General Counsel  
Xcel Energy  
414 Nicollet Mall, 401 - 8<sup>th</sup> Floor  
Minneapolis, MN 55401  
[matt.b.harris@xcelenergy.com](mailto:matt.b.harris@xcelenergy.com)

Lynnette Sweet  
Regulatory Administrator  
Xcel Energy  
414 Nicollet Mall, 401 - 7<sup>th</sup> Floor  
Minneapolis, MN 55401  
[regulatory.records@xcelenergy.com](mailto:regulatory.records@xcelenergy.com)

Any information requests in this proceeding should be submitted to Ms. Sweet at the Regulatory Records email address above.

## V. COMPANY PROPOSAL

In developing the Company's proposed NDT accrual, it is important to consider the timing of this triennial filing. Most notably, we are making this filing while our 2019 IRP, in which we and our stakeholders are considering the long-term future of our nuclear fleet, is pending before the Commission.

In its January 11, 2017 Order in the Company's last IRP, the Commission specifically ordered that the Company describe in its next IRP "its plans and possible scenarios for cost-effective and orderly retirement of its aging baseload fleet, including Sherco, King, Monticello, and Prairie Island."<sup>5</sup> The 2019 IRP, therefore, addresses several alternatives for our nuclear fleet, including the continued operation of the units through the end of their licensed lives, possible early retirements of one or more units, and/or possible life extensions. Of these alternatives, the Company's Preferred Plan in the June 30, 2020 IRP Supplement proposes to extend the licensed life of the Monticello Plant, leaving the decision of whether to extend the life of Prairie Island (which is currently scheduled to retire several years after Monticello) for the next IRP. Consistent with that direction, we analyzed the impacts of the Monticello extension on the NDT accrual.

Additionally, Schedules J, K, and L thoroughly discuss alternative decommissioning scenarios, including both immediate decommissioning (DECON)<sup>6</sup> as well as the SAFSTOR<sup>7</sup> alternative. In fact, the Department raised SAFSTOR as an alternative in our 2015 IRP, noting that it would allow the decommissioning funds to accrue interest following retirement of the plants.<sup>8</sup> We note that the day before making this filing, we discovered additional review of our modeling of the SAFSTOR alternative scenarios is required. This additional review will not change our recommended accrual, but we expect that it may lower the SAFSTOR alternative accruals. We will

---

<sup>5</sup> Docket. No. E002/RP-15-21 (January 11, 2017 Order at 12.)

<sup>6</sup> DECON is defined by the NRC as, "[a] method of decommissioning in which the equipment, structures, and portions of a facility and site containing radioactive contaminants are removed and safely buried in a low-level radioactive waste landfill or decontaminated to a level that permits the property to be released for unrestricted use shortly after cessation of operations."

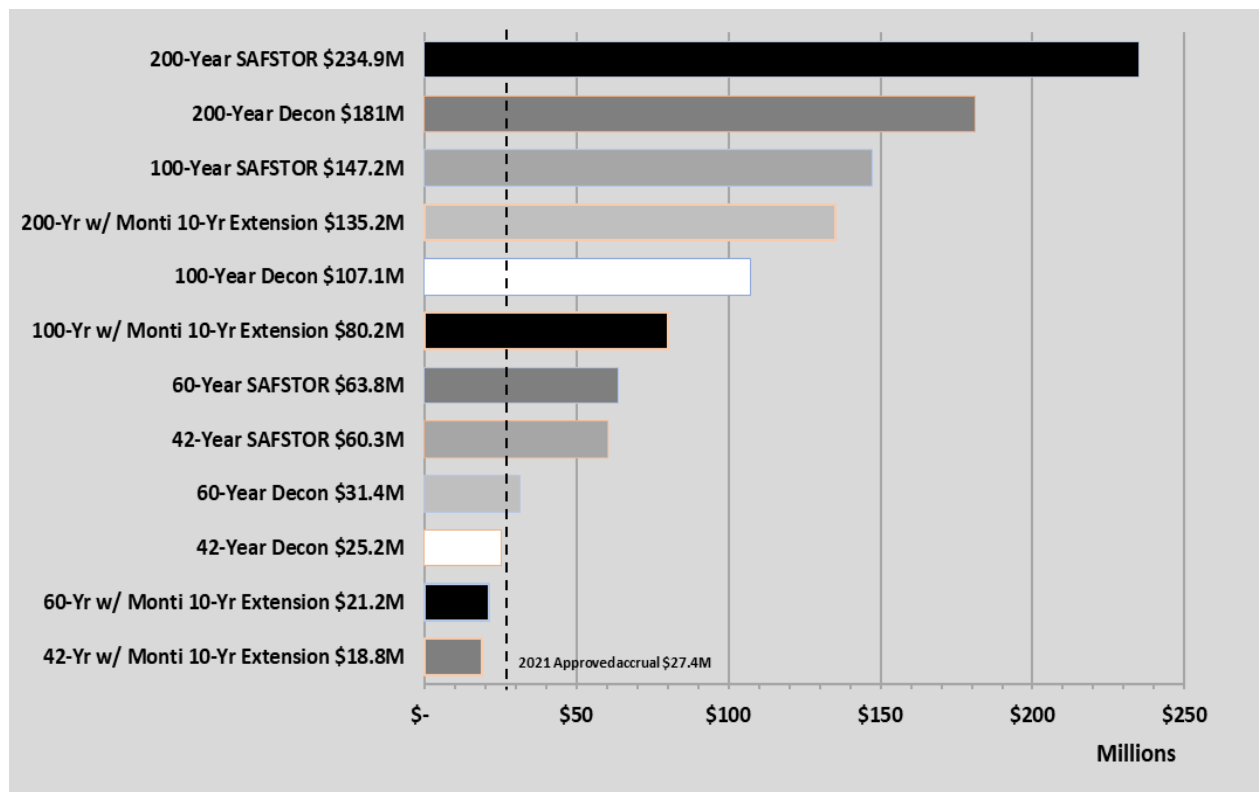

<sup>7</sup> SAFSTOR is defined by the NRC as, "[a] method of decommissioning in which a nuclear facility is placed and maintained in a condition that allows the facility to be safely stored and subsequently decontaminated (deferred decontamination) to levels that permit release for unrestricted use."

<sup>8</sup> Docket. No. E002/RP-15-21 (Department's July 8, 2016 Comments at 37-38).

file a supplement to this Petition with revised schedules based on the updated SAFSTOR calculations.

These two decision points—how long to operate the plants and how to decommission them—could have a dramatic impact on the accrual calculation for the NDT. The following table shows the potential accrual amounts under various scenarios involving the length of time Monticello runs, the method of decommissioning, and the amount of time the spent fuel is stored in Minnesota.

**Table 1 – Nuclear Decommissioning Triennial Accrual Alternatives**

In preparation for this Petition and setting our proposed accrual, we analyzed a variety of decommissioning scenarios and calculated a number of different accruals for the Commission. We discuss these various scenarios below. We also set forth all of the information required by the relevant statutes, Commission rules, and past Commission Orders.

Based on our review of these scenarios, we recommend increasing the annual accrual to \$31.4 million—the 60-year DECON Scenario identified in Table 1 above. The overall goal of the decommissioning accrual schedule is to ensure that the customers who benefit from nuclear power pay all the costs associated with that power at the

time it is generated—including the costs to eventually decommission the plants. We believe our proposal to increase the currently approved accrual to \$31.4 million is reasonable because it is consistent with past decisions setting accruals.

Although we considered accrual scenarios based on the extension of the Monticello operating license, we do not recommend adopting an accrual based on those scenarios at this time. We make this recommendation because the 2019 IRP remains pending, and the status of the Monticello extension is uncertain. Additionally, extending the license for Monticello requires obtaining additional regulatory approvals, including securing a Subsequent License Renewal from the Nuclear Regulatory Commission (NRC) and a Certificate of Need for additional spent fuel storage from the Commission. In light of these uncertainties, we believe it is most appropriate at this time to set the accrual based on a scenario that does not include a license extension. We note, however, that were we to account for the Monticello extension, the annual accrual could drop to \$21.2 million. Moreover, should the extension ultimately be approved, the accrual can be adjusted accordingly at a later date.

Finally, we propose to continue the assumption that the Department of Energy will continue to provide refunds for dry cask storage during the decommissioning process, as approved by the Commission in its March 20, 2020 Order in Docket No. E002/M-17-828

We believe this proposal is reasonable and represents the best path forward, while recognizing other decisions the Commission may make would require us to update the proposed accrual in the future. The remainder of this Petition presents the information and analyses that are required by statute, Commission rules, and past Commission Orders for triennial filings.

## **VI. REQUIRED DECOMMISSIONING INFORMATION**

### **A. Scenarios Evaluated**

Consistent with previous filings, the Company examines the impact of assumptions in (1) the engineering cost estimate; (2) costs associated with spent fuel storage following plant shutdown; (3) inflation and escalation; (4) earnings rates; (5) fund investment structure; and (6) recovery period.

As required by Minn. Stat. § 216B.2445, the Company provides scenarios assuming spent fuel will be stored in the State for 60 years, 100 years, and 200 years following cessation of operations at the plant. We include a 60-year scenario without recasking as our base case. This scenario is supported by the NRC evaluation and conclusion

that casks can safely store spent fuel for a minimum of 60 years and assumes replacement after 100 years. We discuss this assumption further in Part B.1.b.ii below. However, pursuant to the Commission's Order in our previous Triennial Nuclear Decommissioning Accrual filing, we have also provided 100-year and 200-year scenarios that include the cost of recasking every 50 years.<sup>9</sup> In addition, we are including a scenario that assumes spent fuel will be stored in the state for only 42 years. The scenarios discussed above have been provided using the immediate decommissioning (*i.e.*, DECON) scenario for decommissioning, which is consistent with what was provided in the 2017 Filing. In addition to these four DECON scenarios, the Company has provided delayed removal and dismantling (*i.e.*, SAFSTOR) scenarios assuming the same durations as the DECON scenarios. These two alternatives are discussed in Schedule A, which lays out the annual cash flows, as well as the cost estimate report provided by TLG Services, Inc. (TLG) in Schedule J for Monticello, Schedule K for Prairie Island, and Schedule L for the Monticello 10-year license extension.

The decommissioning accrual is an annuity calculation based on the yearly expenditures, in nominal dollars, provided for each cost estimate scenario. The cost estimate is jurisdictionalized for Minnesota retail customers using 72.9219% as presented in the current Minnesota rate case.<sup>10</sup> The escalation rate is used to inflate the jurisdictional cost estimate to future years, and the earnings rate represents the expected return of the fund. Then, an annuity payment is calculated such that, when added to the current fund balance and grown at the forward-looking after-tax expected return, it will result in an estimated fund balance sufficient to satisfy the estimated dismantling costs.

In total, the Company includes twelve accrual scenarios in this Petition. Eight are based on the DECON assumption. Four are based on the SAFSTOR assumption. Within each of these assumptions, we include scenarios for a 42-year, 60-year, 100-year, and 200-year dry cask storage operational period. All scenarios assume an accrual change in 2022. The accrual scenarios are presented in Schedule E.

---

<sup>9</sup> *In the Matter of Northern States Power Company's for Approval of the 2016-2018 Triennial Nuclear Plant Decommissioning Accrual*, Docket No. E002/M-14-761, ORDER APPROVING NUCLEAR DECOMMISSIONING STUDY, ASSUMPTIONS, AND ANNUAL ACCRUAL, AND SETTING FILING REQUIREMENTS (October 5, 2015).

<sup>10</sup> *IN THE MATTER OF XCEL ENERGY'S APPLICATION FOR AUTHORITY TO INCREASE ELECTRIC RATES*, Docket No. E002/GR-20-723 (November 2, 2020).

## B. Primary Factors Changed Since 2017 Filing

The decommissioning analysis includes three discrete steps. The first is to determine a decommissioning cost estimate for a specific scenario.<sup>11</sup> The second is to determine the forward-looking expected-return estimate and escalation rate for the NDT. The forward-looking expected return is based on the investment mix over the relevant time period and includes an analysis of the expected returns on various asset classes and changing investment strategies based on when liquidity would be needed to cover decommissioning costs. The third step is to calculate an annual accrual necessary to fully fund the costs of decommissioning for each site based on the escalation rates and earnings estimates developed for the chosen scenario.

This section of the Petition examines the three primary drivers that contribute to changes in the amounts needed for decommissioning at the expiration of the plants' current operating licenses:

- *Changes to the engineering and other cost estimates.* We revised the engineering cost estimates, to transfer spent fuel from the pool to the Independent Spent Fuel Storage Installation (ISFSI) within 4 years of shutdown, rather than the 5 years previously used. This change reflects the Company's belief that the 5-year assumption was an overly conservative estimate, as industry peers are currently transferring spent fuel in as few as 2–3 years following plant shut down.
- *Changes in assumptions about escalation/inflation of costs over time.* We utilized two escalation/inflation rates: one for the labor cash flows and one for the non-labor cash flows;
- *Revisions to the forward-looking expected returns.* We applied two earnings rates: one for the operation period and another for the post shutdown period.

A detailed discussion of each of these primary drivers is provided below.

### 1. Engineering and Other Cost Estimates

Our consultant, TLG Services, Inc. (TLG), performed site-specific cost estimates for the twelve scenarios noted above (eight fuel scenarios for DECON and four fuel scenarios for SAFSTOR for each of the two sites). Schedules A.1-A16 show TLG's schedules of annual expenditures for each of the scenarios individually. A more complete comparison of the cost estimates between the previous filing and this filing is provided in Schedule A.

---

<sup>11</sup> In all scenarios, it is assumed that the site is fully dismantled, radiologically decontaminated, and restored.

In addition to the cost estimates from TLG, the Company has provided a calculation of the NRC minimum funding amount applicable to the Company's facilities in Schedule A. The NRC minimum is a calculation of a generic cost to decommission based on the output of a unit and is calculated using a formula specified by the NRC. It is not intended to be a site-specific estimate of decommissioning, as it does not address site-specific issues. Instead, the NRC uses this as a gauge of the minimum level of funding a licensee must have to meet the NRC's funding assurance requirements of future decommissioning. Consistent with prior filings, the Company does not use the NRC minimum to determine the need for future decommissioning funding, but we provide it as a comparison data point for analysis. All the cost estimates from TLG are greater than the NRC minimum calculations, thus the accrual we propose is designed to fund more than the NRC minimum.

The decommissioning cost estimate is driven by two primary factors: the choice of decommissioning alternative for the radiological removal of the plant and the duration of fuel storage on site after operations. We discuss each in turn below.

a. Decommissioning Alternatives for Radiological Removal

The alternative chosen for the removal and decontamination of the radiological components of the nuclear plant can vary the timing of when the costs are incurred from early in the decommissioning timeframe for DECON to almost 50 years after operations cease for SAFSTOR. The annual costs associated with the radiological decommissioning alternative are similar across all the different spent fuel storage scenarios that are provided. For example, with the DECON method, the radiological removal costs are the same for the 42-year, the 60-year, the 100-year, and the 200-year spent fuel storage scenarios. Thus, the duration for storing spent fuel remaining on site does not affect the annual costs for the radiological decommissioning.

In addition to DECON scenarios, the Company has evaluated and provided SAFSTOR scenarios, in light of a significant number of plants using the SAFSTOR method. Of the nuclear plants in decommissioning, 10 sites are in SAFSTOR, 10 are in DECON, and 7 are complete and categorized as ISFSI-only. Many of these plants have stated, however, they do not intend to take the full 60 years but will finish decommissioning when economically viable. As noted above, we have discovered additional review of our modeling of the SAFSTOR scenarios is necessary, and we will provide updated analysis in a supplement to this Petition.

Regardless of the decommissioning option, we anticipate the plant will put all of its used fuel into dry storage containers and move it to the ISFSI within the first four years following shutdown. This could occur even faster as technology continues to

evolve. For example, Oyster Creek and Pilgrim nuclear plants, which shut down in 2018 and 2019 respectively, plan to have their used fuel moved to ISFSI less than 3 years after shutdown according to information supplied by their owner, Holtec International.

With either method, once the fuel has been moved to dry casks, the spent fuel pool and supporting systems can be dismantled, meaning that the pool can be drained and supporting equipment can be de-energized and secured. For SAFSTOR, the plant is then left intact during the dormancy period. During this time, there is a 24-hour security force, and maintenance of security systems along with lighting, building maintenance, ventilation and radiation monitoring programs. This dormancy period allows for an eventual reduction in worker dose rates during decommissioning as systems are allowed to decay before full dismantlement. It also results in a reduction in radioactive waste volumes at time of full dismantlement, which results in cost savings.

b. Period that Spent Fuel Could Potentially Remain Onsite

The second issue that influences the overall cost estimate is the duration of fuel storage after shutdown and the procedures in place for the handling of spent fuel. These include the period spent fuel remains in the pool, the period the fuel is stored onsite, and whether the fuel has to be moved to a second cask while stored onsite.<sup>12</sup>

As with all decommissioning cost estimates, the dismantlement and removal of contaminated structures cannot be completed until all spent fuel has been removed from the reactors and storage pools and placed in dry storage containers in the ISFSI. Final release of the site from all licenses will occur once all of the fuel is removed from the onsite storage facility and the storage facility itself has been removed. The differences between the 42-year and 60-year scenarios and the 100-year and 200-year scenarios are in part related to the storage facility operational period and whether the fuel storage scenario included costs to replace spent fuel dry storage casks every 50 years (*i.e.*, recasking). In our spent fuel scenarios, the 42-year and 60-year scenarios do not include recasking. The 100-year and 200-year scenarios include recasking every 50 years. Our recasking assumptions are discussed further in Part c below.

---

<sup>12</sup> In our last triennial nuclear decommissioning filing, the Commission ordered that the Company provide a more detailed break out of “spent fuel management” costs in future decommissioning filings. In reference to this request the Company first notes that the engineering cost estimate provided in this filing contains tables 3.1-3.7 containing the costs assigned to spent fuel management by cost category and year for all seven scenarios. The cost estimates also provide a narrative discussion regarding what these costs include in section 2.1.4.

In developing the strategy for spent fuel shipping for the 60-year, 100-year, and 200-year scenarios, a key assumption is that all fuel would be shipped from one site first (Prairie Island) followed by the second site (Monticello). Allocations of space for shipping to a federal facility are provided on a company-wide basis, and the Company has the discretion to ship spent fuel from either site first, or both sites at the same time. If spent fuel were shipped from both sites at the same time, both ISFSIs would have to operate for the entire time period following shutdown, *i.e.* 60 years, 100 years, or 200 years. By completing shipping from one site first, overall costs would be lowered because the costs of operating and securing the first site's ISFSI are eliminated approximately 13 years earlier.

However, the 42-year scenario assumes shipping from both sites simultaneously, resulting in the Prairie Island ISFSI operating until 2064 (31 years after plant shutdown) and the Monticello ISFSI operating until 2062 (32 years after plant shutdown). Table 2 below depicts the years that spent fuel shipping will begin and finish for the 42-year, 60-year, 100-year, and 200-year scenarios. The fuel shipping commencement and completion dates do not change because of the decommissioning alternative chosen or whether recasking is performed.

**Table 2 – Spent Fuel Shipping Schedules**

<b>Plant</b>	<b>Year Shipping Begins</b>	<b>Year Shipping Finishes</b>
42-year Scenario		
<b>Prairie Island</b>	2027	2064
<b>Monticello</b>	2042	2062
60-year Scenario (recasking or no recasking)		
<b>Prairie Island</b>	2053	2077
<b>Monticello</b>	2078	2090
100-year Scenario		
<b>Prairie Island</b>	2093	2117
<b>Monticello</b>	2118	2130
200-year Scenario		
<b>Prairie Island</b>	2193	2217
<b>Monticello</b>	2218	2230

These shipping schedules are informed by two sets of activities that are occurring at the national level. The first is the status of federal and private storage initiatives, permanent or temporary and the second is the NRC's Continued Storage of Spent

Nuclear Fuel rule which went into effect on October 20, 2014.<sup>13</sup> Each is discussed in greater detail below.

- i Status of Federal and Private Storage Initiatives, Permanent or Temporary.

**Licensing of Yucca Mountain.** The application to license the Yucca Mountain permanent repository remains pending before the NRC, following the unsuccessful attempt by the Obama Administration to terminate the proceeding and withdraw the application. The NRC Staff's technical and environmental reviews have been essentially completed, but the adjudicatory hearings on the application before the NRC Atomic Safety and Licensing Board remain suspended pending Congressional appropriations for both DOE and NRC. Numerous contentions submitted by Nevada and other opponents remain to be litigated and must be resolved before the NRC can license the project. The Administration did not include any funding for Yucca Mountain in the FY2021 budget proposal but included \$27 million to explore interim storage of waste at other sites. This bill is the first in recent years to not include any funding for Yucca Mountain, (compared with \$116 million in the FY 2020 and \$120 million in the FY 2019 budgets for both interim storage and Yucca Mountain). The reversal of the Administration's position is thought to be for political reasons. On July 13, 2020, the House Appropriations Committee adopted funding similar to the Administration's proposal and authorized \$27.5 million for interim storage only. The full House passed the bill by a vote of 217-197 on July 31, 2020. Any differences between the House and Senate bills will need to be resolved in conference. Current FY2021 funding is ongoing but it is unlikely there will be Yucca Mountain funding.

**Consolidated Interim Storage.** Away-from-reactor spent fuel storage as contemplated in the Nuclear Waste Policy Act (known as "Monitored Retrievable Storage") has not been part of the DOE's program since the early 1990s, though it remains in the NWPA. Three private initiatives are discussed below.

#### *Private Fuel Storage Initiative*

The Company pursued interim spent fuel storage with an eight-utility consortium Private Fuel Storage (PFS) project in Utah. PFS proposed to build a spent fuel storage facility on the West Central Utah reservation of the Skull Valley Band of

---

<sup>13</sup> A copy of the Federal Register Notice which published the final NRC rule entitled, "Continued Storage of Spent Nuclear Fuel" dated September 19, 2014 can be found at the following web location:  
<http://www.gpo.gov/fdsys/pkg/FR-2014-09-19/pdf/2014-22215.pdf>

Goshute Indians. PFS and the Skull Valley Band entered into a lease in December 1996 that allowed for temporary storage of spent fuel for both the Prairie Island and Monticello plants.

The license application for the PFS Project was submitted to the NRC in June 1997. In February 2006, the NRC issued PFS a license for the interim storage facility. In September 2006, the U.S. Department of the Interior (DOI) disapproved the lease between PFS and the Skull Valley Band and at the same time denied PFS a right-of-way across federal land for the transport of spent fuel to the Skull Valley Reservation. In July 2010, the U.S. District Court for the District of Utah found that the DOI decisions were arbitrary and capricious for not properly considering evidence in the record and improperly relying on evidence outside of the record. The court vacated the DOI decisions and remanded the PFS's right-of-way application and lease to the DOI for further consideration, which was not initiated.

The State of Utah and a group opposed to the PFS Project appealed the NRC's license issuance for the PFS facility to the D.C. Circuit. The appeal was administratively terminated by the Court on its own motion in April 2018, without prejudice to the reopening of the case by any party. Even if the lease were approved and the right-of-way granted, the project must still overcome significant hurdles.

Because of the lengthy approval process that PFS experienced, companies who were initially interested have instead constructed onsite dry fuel storage facilities. A decision to revive the PFS project would depend on the outcome of the DOI's reconsideration, the judicial challenge at the D.C. Circuit if reinstated, continued opposition in Utah, and on sufficient interest and commitment to use the facility by companies with spent fuel, none of which is currently apparent.

#### *Interim Storage Partners (ISP) Consolidated Interim Storage Facility*

A centralized interim storage project was initiated by Waste Control Specialists (WCS) for a site in Andrews County, Texas, adjacent to WCS's existing low-level radioactive waste and hazardous waste storage and disposal facilities. The NRC license application for this project was filed in April 2016. In April 2017, WCS asked the NRC to suspend the review of this application. Subsequently, WCS and Orano USA (formerly Areva Nuclear Materials) formed a joint venture to license the facility. In response to letters to the NRC in June and July 2018 from the joint venture ISP, the NRC restarted its review of the application. In response to NRC's August 2018

notice of opportunity for hearing, a number of environmental and other organizations sought to intervene in the NRC proceeding. At about the same time, two organizations moved the Commission to reject the application (and the Holtec application described below), alleging that the NRC lacked the jurisdiction to consider the application. After the Commission denied those requests, one of the organizations appealed to the U.S. Court of Appeals for the D.C. Circuit on December 27, 2018. On June 13, 2019, in considering the NRC's motion, the Court dismissed the case as not ripe for judicial review. On August 23, 2019, the Atomic Safety and Licensing Board considered the hearing requests, admitted one contention submitted by one of the petitioners, and dismissed the remaining contentions and petitioners. A subsequent Licensing Board decision dismissed this contention as moot and rejected an attempt to amend the contention. The Board also dismissed another petitioner's late-filed contention. Appeals from the August 2019 Board decision remain pending before the Commission, and a late-filed contention submitted by one of the petitioners remains pending before the Board. The NRC's recently revised schedule for the environmental review shows a final EIS by July 2021.

#### *Holtec HI-STORE Consolidated Interim Storage Facility*

Holtec International has proposed the HI-STORE Centralized Interim Storage Facility for a site in Eddy and Lea Counties in southeastern New Mexico. Holtec filed an application with the NRC for this facility in March 2017. As noted above, a number of environmental and other organizations challenged the application, and following extensive proceedings in front of the NRC, Atomic Safety and Licensing Board, and in courts, the NRC's recently revised schedule for the environmental review shows a final EIS by July 2021.

#### ii. NRC Continued Storage of Spent Nuclear Fuel Rule

Historically, Waste Confidence has been the NRC's generic determination regarding the environmental impacts of storing spent nuclear fuel beyond the licensed life for operation of a nuclear power plant. This generic analysis has been incorporated into the NRC's reviews under the National Environmental Policy Act for new reactor licenses, license renewals, and ISFSI licenses through the Waste Confidence Rule. On June 8, 2012, the U.S. Court of Appeals for the DC Circuit found that some aspects of the Waste Confidence Rule did not satisfy the NRC's National Environmental Policy Act obligations and vacated the rulemaking.<sup>14</sup> The court indicated that, in making either a Finding of No Significant Impact based on an Environmental

---

<sup>14</sup> *New York v. NRC*, 681 F.3d 471 (D.C. Cir. 2012)

Assessment or in an Environmental Impact Statement, the NRC needed to add additional discussions concerning the impacts of failing to secure permanent disposal for spent nuclear fuel, and concerning the impacts of certain aspects of potential spent fuel pool leaks and spent fuel pool fires.

In response to the court's decision, the NRC suspended final licensing decisions on new reactors, reactor license renewals, and spent fuel storage facility renewals. The NRC subsequently directed its staff to develop a new rule within 24 months.

On Sept. 6, 2012, the NRC Commission directed NRC staff to proceed with a Generic Environmental Impact Statement (GEIS) to analyze the environmental impacts of continued storage, address the issues raised in the Court's decision, and update the rule in accordance with the analysis in the GEIS. The final rule and GEIS was renamed from "waste confidence" to "continued storage of spent nuclear fuel" in response to public comment to more accurately reflect the nature and content of the rule. The GEIS and final rule effective October 20, 2014, implemented the Commission's direction.

The rule does not authorize, license or otherwise permit nuclear power plant licensees to store spent fuel for any length of time. Rather, the continued storage rule adopts the findings of the GEIS regarding the environmental impacts of storing spent fuel at any reactor site after the reactor's licensed period of operations. As a result, those generic impacts do not need to be re-analyzed in the environmental reviews for individual licenses. The GEIS analyzes the environmental impact of storing spent fuel beyond the licensed operating life of reactors over three timeframes: for 60 years (short-term), 100 years after the short-term scenario (long-term) and indefinitely. However, availability of a deep geologic repository within 60 years is commented on by the NRC in the Federal Register Notice of the Rule where it states on page 56,254:

*The United States national policy remains disposal of spent fuel in a geologic repository, and, as stated in the GEIS, the NRC believes that the most likely scenario is that a repository will become available by the end of the short-term timeframe (60 years beyond the licensed life for operation of a reactor).*

The possibility of even longer service times is supported by the evaluations performed in the NRCs NUREG-2157, Generic Environmental Impact Statement for Continued Storage of Spent Nuclear Fuel. Under the renewed ISFSI licenses, cask monitoring and maintenance activities are reviewed and approved by the NRC and provide reasonable assurance the casks will continue to store used nuclear fuel safely for a minimum of 60 years.

In NUREG- 2157, “The NRC assumes the replacement of dry casks after 100 years of service life, however, replacement times will depend on actual degradation observed during continued regulatory oversight for maintain safety during continued storage.”

c. Recasking Assumptions

We believe it is reasonable and appropriate to assume that no recasking will be necessary for either the 42-year or 60-year scenarios. Recent activities by the NRC indicate that cask life is at least 100 years or longer. This is supported by the NRC’s recent actions to process the renewal of the licenses of multiple ISFSIs,<sup>15</sup> including for Prairie Island, a total operation period of 60 years (a 20-year initial license plus a 40-year renewal) of operation. Under the renewed ISFSI licenses, cask monitoring and maintenance activities are reviewed and approved by the NRC and provide reasonable assurance that the casks will continue to store used nuclear fuel safely for a minimum of 60 years.

In addition, in the Generic Environmental Impact Statement for Continued Storage of Spent Fuel published in NUREG-2157 in September 2014, the NRC states, “The NRC assumes replacement of dry casks after 100 years of service life; however, replacement times will depend on actual degradation observed during continued regulatory oversight for maintaining safety during continued storage.” Taken together, we believe these findings support our assumption that no recasking will be necessary under the 60-year scenario. We further note that the large step up in the accrual for any scenarios with recasking is primarily due to the recasking assumption that is included in the cost estimate.

The Prairie Island site specific ISFSI license (SNM-2506), which permits storage of the TN-40 casks, was issued in 1993 for a 20-year period. The associated Safety Analysis Report (SAR) described a minimum design life of 25 years. The Company subsequently applied for, and the NRC granted, a renewal of license SNM-2506 for an additional 40 years through 2053. As part of the license renewal process, a review of Time-Limited Aging Analyses (TLAA) and the Aging Management Review (AMR) of the ISFSI systems, structures, and components were conducted. TLAA reviews identified analyses that were required to be performed to demonstrate intended functions would be maintained during the period of extended operation. AMRs identified aging effects/mechanisms that could adversely affect the ability of the systems, structures, and components to perform their safety functions during the period of extended operation and the application identifies an acceptable aging

management program to be implemented prior to the period of extended operation at the site. The NRC Staff reviewed the AMRs and the Aging Management Programs proposed by the Company and added license conditions reflecting the Aging Management Programs.

The Monticello ISFSI casks are authorized by Certificate of Compliance 72-1004 which permits the use of each cask for 20 years from the date it is placed into service. The associated SAR described a service life of 50 years. The general license holder (TN Americas LLC) has subsequently applied for a renewal of Certificate of Compliance 1004 for an additional 40 years. This application is pending NRC approval. As part of the license renewal process, a review of TLAA and the AMR of the ISFSI systems, structures, and components was conducted. TLAA reviews identified analyses that were required to be performed to demonstrate intended functions would be maintained during the period of extend operation. AMRs identified aging effects/mechanisms that could adversely affect the ability of the systems, structures, and components to perform their safety functions during the period of extended operation, and the application identifies an acceptable aging management program to be implemented prior to the period of extended operation at the site. The application included SAR markups to modify the service life to 60 years.<sup>16</sup>

Based on TLAA and AMRs that have been performed, experience to date and continuation of approved aging management programs to ensure that monitoring and maintenance are adequately performed, the Company believes it is reasonable to assume the licenses and Certificates of Compliance may eventually be renewed for an additional 40 years, or longer.

d. Technical and Regulatory Barriers to Transporting Spent Fuel

There are no technical or regulatory barriers to transporting spent fuel. The NRC regulates the transportation of commercial spent nuclear fuel in accordance with 10 CFR Part 71 – Packaging and Transport of Radioactive Material. Over the past 30 years, the DOE, NRC and the nuclear industry have safely completed approximately 3,000 shipments of spent nuclear fuel and high-level waste. There is also extensive worldwide experience with spent nuclear fuel transportation: more than 70,000 metric tons of uranium of spent nuclear fuel has been safely shipped in the past 25 years, including all the fuel from the Company's decommissioned Pathfinder nuclear plant

---

<sup>16</sup> The manufacture warranty states the design of the casks shall conform and comply with the applicable NRC requirements for 20 years. The warranty on the material and services typically applies for 2- 5 years from the date of services or material delivery.

in South Dakota and 1,058 fuel assemblies from the Company's Monticello Nuclear Generating Plant to a storage facility in Morris, IL This is equal to the amount the DOE will ship to a permanent repository as authorized in the Nuclear Waste Policy Act. Barriers are largely political and at the state level along the proposed transportation routes. DOE continues to provide funding to work on the potential transportation barriers such as public education and emergency planning along the transportation routes.

Under contract with DOE, nuclear plant operators are required to prepare spent fuel for shipment to DOE. To ship spent fuel the nuclear plant, operators are required to place the fuel in NRC-approved containers for transportation. The casks used for storage at Monticello and Prairie Island also will be used for transportation, and there will not be a need to move spent fuel from their current storage container prior to transport. The actual transportation will be the responsibility of DOE. To accomplish this, title and liability for the spent fuel will be transferred to DOE when the spent fuel transportation container crosses the nuclear-plant site boundary and is in the possession of DOE.

In addition, as described above, two private companies are moving through the NRC licensing process to open centralized interim storage facilities and would transport fuel using a private shipment model. The Company continues to lead important initiatives to prepare the industry and work with stakeholders to move used fuel either to interim or permanent storage facilities.

- e. Industry decommissioning status and use of third-party contractors

In compliance with Order Point 10 of the Commission's January 7, 2019 Order regarding the 2017 Filing, we provide this information regarding the use of third-party contractors for decommissioning the Prairie Island Nuclear Generating Plant.

The Zion plant in Illinois has been going through decommissioning under the responsibility of a third-party contractor, EnergySolutions (*i.e.*, ZionSolutions), which began decommissioning the plant in 2010. All of the above-grade plant structures at Zion have been removed. Radiological final status surveys and site restoration was completed in 2020. These results are significant because Zion's operating utility—Exelon—previously assumed that a decades-long SAFSTOR period would be required for its decommissioning trust to grow and become fully funded. Thus, the growth of third-party firms could reduce the prevalence of SAFSTOR if plants are able to decommission at a cost that is less than previously anticipated.

The NRC approved a transfer of the license of the Vermont Yankee plant from Entergy to a third-party decommissioning firm, NorthStar Group Services in July 2018. Like Exelon, Entergy had originally planned to enter a decades-long SAFSTOR period to allow its decommissioning trust funds to grow to a level sufficient to decommission the plant, but NorthStar stated that it can begin decommissioning immediately and complete it by 2030 and possibly as early as the mid-2020s. As we understand the transaction, NorthStar has taken over ownership of the plant and corresponding decommissioning trust. It will use the trust funds to decommission the plant and retain any unspent funds as profit from the transaction. In other words, NorthStar believes it can fully decommission the Vermont Yankee plant for less than Entergy anticipated when it originally planned to manage the decommissioning, and it was willing to take the risk associating with achieving these savings. The NRC approved the license transfer in October of 2018 and the Vermont Public Utility Commission issued an order approving the sale in December.

Holtec International (Holtec) has also emerged as a significant firm in the decommissioning industry. In 2019 Holtec purchased both the Oyster Creek and Pilgrim Nuclear plants for decommissioning. Holtec also announced an agreement in April 2019 to acquire Entergy's Indian Point Nuclear power plant units for expedited decommissioning. Under that agreement, Entergy will sell Units 1, 2, and 3 to a Holtec subsidiary, transferring licenses, spent fuel, decommissioning liability, and nuclear decommissioning trusts for the units.

Finally, Duke Energy Florida has finalized a contract with Accelerated Decommissioning Partners to do the decommissioning work at a cost of approximately \$540 million, with Duke remaining the owner but ADP is now the operator of Crystal River. They now expect the plant to be decommissioned by 2027 with only the dry cask storage facility remaining thereafter.

## 2. *Escalation/Inflation Rate*

The second primary driver of the decommissioning estimate is an updated set of assumptions regarding escalation and inflation. Goldman Sachs Asset Management (GSAM), our investment advisor for the NDT, provided the forecast analysis for the escalation/inflation rates used in this filing's accrual calculations. A more comprehensive narrative of this analysis and accompanying graphs are included in Schedule B, which includes a discussion of the economic and inflation factors, including gross domestic product growth, labor productivity, and other considerations utilized in estimating long-term inflation rates.

The Company recommends a 3.78 percent escalation rate for the labor component of decommissioning and a 2.58 percent escalation rate for the non-labor components. The 1.2 percent difference in this escalation rate for non-labor reflects the fact that increases in labor productivity will not have an impact on escalation of non-labor costs. These two rates were factored into the calculation of the future costs of nuclear decommissioning. However, the Prairie Island Indian Community payments were not escalated as they remain constant each year until the fuel is removed from the site.

### 3. *Forecast Earnings Rate*

GSAM also provided the analysis for the forecasted earnings rate, which was reviewed internally for reasonableness. A more comprehensive narrative of this analysis and accompanying graphs are included in Schedule C, which includes a discussion of the analytical framework used by GSAM to arrive at the forward-looking expected returns. It also includes a discussion regarding our investment strategy, investment and economic assumptions, and the expected returns for the various classes of investments that are currently a part of the fund.

While there is inherent uncertainty in any forward-looking expected return and escalation/inflation forecasts, the longer it takes to complete the decommissioning, the more time the fund has to compound earnings on the amounts contributed. At the same time, however, a longer decommissioning period also subjects the fund to more risk that the estimated earnings will not be realized as expected.

Consistent with our past triennial filings, the Company recommends a stratification of the earnings rate between the operational period and the decommissioning period. We also recommend two earnings rates for each facility to better match the earnings rates with the individual cost estimates and to better replicate the separation in the Qualified Trusts within the NDT. Each unit has its own set of earnings rates due to the difference in the timing of cash flows and different decommissioning start dates. Table 3 below shows the expected after-tax returns that are representative of the analysis detailed in Schedule C.

**Table 3 – Earnings Rates Forecast**

Nuclear Unit	<u>60-Year Scenario</u>			
	<u>2017 Rates</u>		<u>2020 Rates</u>	
	Operations	Decom.	Operations	Decom.
Monticello	5.00%	4.43%	3.80%	3.10%
Prairie Island Unit 1	4.99%	4.15%	4.01%	2.80%
Prairie Island Unit 2	5.04%	4.09%	3.98%	2.72%

The decrease in the expected after-tax returns is largely the result of lower overall interest rates in the market impacting forward looking expected returns for multiple asset classes.

### C. Trust Structure & Investment Strategy

The NDT investments are contained in three Qualified Trusts, which are a standard decommissioning fund that cannot be refunded to customers until all decommissioning activities are completed. The Company has established an individual Qualified Trust for each nuclear operating unit to hold the decommissioning funds required by the NRC.

Below we discuss our investment strategy for the NDT as well as our liquidity assumptions for the trust.

#### 1. Investment Strategy

As discussed in previous triennial dockets, the Company's NDT Committee routinely evaluates both the NDT's performance and the overall investment strategy for the fund (including its asset allocation), and it revises both the strategy and allocation as necessary.

As part of this Triennial Nuclear Decommissioning Accrual filing, the Company undertook a comprehensive review of our investment allocations to evaluate portfolio changes that would be effective over the next triennial period. The process of determining the portfolio's asset mix is called asset allocation optimization. Different mixes of assets can produce hundreds, or even thousands, of alternative combinations of risk and returns. As a result, asset allocation techniques are used in practice to evaluate the various possible asset mixes and determine those combinations that are likely to deliver optimal performance in terms of risk and return.

We have used this process to perform a long-term optimization of the asset allocation for the NDT's investments. With any investment, there is always a trade-off between expected risk and the expected rate of return on that investment. Typically, strategies

with higher expected returns also come with higher expected risk and vice versa. The goal is to optimize the trade-off between risk and return over the long term. If, on one hand, too little risk is taken, increased contributions likely will be needed to make up for the lack of sufficient market returns. If, on the other hand, too much risk is taken, it also is possible that increased contributions will be needed in the event an unfavorable outcome is realized

Following the Company’s full analysis of multiple investment portfolios, we recommend the following investment mix shown in Table 4 below. We note that the development of this recommendation followed a process deemed prudent by the independent investment review required by the Commission’s February 27, 2017 Order in Docket No. E002/M-14-761. That review also concluded that the Company “has found an appropriate balance to achieving a reasonable risk adjusted return” and that its asset allocation is “properly diversified amongst a reasonable amount of non-correlated assets classes.”

**Table 4 – Recommended Investment Mix**

<b>Portfolio Line Item</b>	<b>2017 Target</b>	<b>2020 Target</b>
Total Equity	60.0%	58.0%
Private Equity	10.0%	10.0%
US All Cap Equity	25.8%	27.9%
Non-US Developed Equity	14.1%	12.6%
Emerging Markets Equity	10.1%	7.5%
Fixed Income	30.0%	30.0%
Investment Grade Fixed Income	12.1%	19.0%
High Yield Fixed Income	10.0%	5.0%
Emerging Market Debt	7.9%	6.0%
Private Real Estate	10.0%	12.0%
Cash	0.0%	0.0%
<b>Overall fund benchmark:</b>	<b>100.0%</b>	<b>100.0%</b>

Consistent with prior triennial filings, we request that the Commission approve this asset allocation, which we believe results in an optimized trade-off between risk and return over the long term on a forward-looking basis. That said, the Company will continue to analyze the portfolio asset mix and make updates and changes as necessary. In other words, the portfolio mix identified in this filing is a snapshot of a point in time and could change between now and the next triennial filing.

A more detailed discussion of the recommended target asset mix for the decommissioning fund, along with an analysis of the forward-looking expected returns is included in Schedule C.

a. Liquidity Assumptions

Our analysis assumes that the funds are invested in bonds as a cash outlay is approached. For each expected annual outgoing cash flow, assets are converted to bonds ahead of time to give more certainty to the ability to make the payment. Not all funds are converted to bonds – only enough to cover each annual cash outflow. For example, if the conversion is at a five-year period, the first outflows expected in 2030 are converted to bonds in 2025; then in 2026, enough cash is converted to bonds to match the 2031 expected outflow.

**D. Current Fund Balances**

Annually, the Company reports the balances in the various funds in either this petition or a separate letter. The balances for both the Qualified Trust for the MN Jurisdiction are discussed below.

1. *Qualified Trust*

As of June 30, 2020, the Qualified Trust book value balance for all three operating units was a total of \$1,306 million for the MN Jurisdiction, with a total market value of \$1,765 million. The difference between the book value and the market value is the unrealized gains and losses. Table 5 below shows the book and market values by unit. A detailed presentation of each unit's balances is presented in Schedule D.

**Table 5 – Qualified Trust Balance as of June 30, 2020**

Unit	Book Value	Market Value
Monticello	\$594,749,330	\$793,777,262
Prairie Island Unit 1	335,862,951	458,345,888
Prairie Island Unit 2	375,757,525	512,577,436
Total	\$1,306,369,807	\$1,764,700,585

The Qualified Trust balances are maintained by retail and wholesale jurisdictions. The retail jurisdictions are Minnesota, North Dakota, South Dakota, and Wisconsin. The wholesale jurisdictions are Minnesota and Wisconsin; since 2014, there have been no wholesale customers. The wholesale balance that was previously collected from wholesale customers is applied to the estimated dismantling cost on a jurisdictional

basis and reduces the accrual calculation for which the retail customers are responsible.

In Order Point 10 of the January 7, 2019 Order in Docket No. E002/M-17-828, the Commission required that “Xcel shall also report on whether the Company should redistribute to retail customers the wholesale customer contribution.” We believe that redistributing funds is not necessary, but if FERC approval to transfer the funds were sought and received, doing so would not be unreasonable. Whether we redistribute funds from the wholesale customers to retail customers, what is critical is to ensure that the amount of funds assigned to the two wholesale jurisdictions is factored into the Minnesota retail accrual calculation. The reason we believe that we have to factor a portion of the wholesale balance into the accrual calculation relates to the allocation of the cost estimate to each jurisdiction. One hundred percent of the cost estimate is allocated to the retail jurisdictions as these customers carry the burden of funding the remaining amount for decommissioning. If we did not include a portion of the wholesale balance in the accrual calculation, the accrual calculations for each retail jurisdiction will over recover the amount needed by the wholesale balance. Thus, we must account for the Minnesota jurisdictional amount of the Minnesota and Wisconsin wholesale balance when calculating the accrual.

The book value balance for the Minnesota and Wisconsin wholesale jurisdictions in total was \$49.7 million, and the market value was \$66.5 million at June 30, 2020. The proposed distribution of these balances using the rate case demand allocators, assigned 72.9219% of the total to the Minnesota Retail jurisdiction, or \$36.2 million additional book value balance and \$48.5 million in market value balance. The allocation of the wholesale jurisdiction balances is included in Schedule D. Including the Minnesota Retail portion of the wholesale jurisdiction balances to the June 30, 2020 balances, results in the adjusted balances used in this filing as follows in Table 6:

**Table 6 – Adjusted Qualified Trust Balance as of June 30, 2020**

Unit	Book Value	Market Value
Monticello	\$610,109,002	\$814,968,100
Prairie Island Unit 1	346,629,286	471,960,960
Prairie Island Unit 2	385,837,890	526,255,835
Total	\$1,342,576,178	\$1,813,184,895

## 2. *Beginning Fund Balance for Annuity Calculation*

The 2017 Filing was submitted using the fund's adjusted market values, per the Commission order, and the 2020 filing continues to use the adjusted market value as a basis for the accrual. Using the adjusted market value is consistent with forward looking market conditions and will provide the most justifiable and proper accrual estimate at this time. The adjusted funds currently have a \$470.6 million unrealized net gain. However, not all of this unrealized gain is available to fund decommissioning costs because taxes will have to be paid on the gains when they are realized. Therefore, the June 30, 2020 adjusted market value was dampened by \$131.0 million for the estimated tax that can be expected be paid when the unrealized gain is realized. The Company calculated the tax effect on the June 30, 2020 adjusted market value based on the unrealized gains and losses in the portfolio. This tax effect calculation is shown with each accrual calculation in Schedule E.

## 3. *Escrow Fund*

In the 2014 Filing, the Commission approved the discontinuance of the Escrow Fund and approved the transfer (pour-over) to the Qualified Trust. The Company completed this pour-over in 2016 and reported a zero balance in the Escrow Fund with the 2017 compliance filing to 2014 Filing.

## **VII. EFFECT OF CHANGE UPON THE COMPANY'S REVENUE**

Subdivision 1 (b) of Minn. Stat. §216B.2445 requires the inclusion of an estimated customer impact for each of the assumed periods. For this petition we calculated the rate impact to each of the customer classes on a \$/kWh increase. This was done by allocating the estimated accruals for the various scenarios presented in Schedule F to the customer classes using the most recent Class Cost of Service Study.

The class allocation process used the same stratification methodology approved by the Commission in Docket No. E002/M-11-807 to return the DOE Settlement dollars to customers. This included an approximate 19.0 percent weight to capacity and an 81.0 percent weight to energy usage from Docket No E002/GR-19-564. The accrual was then divided by the energy each class forecasted to be used over a 12-month period ending December 31, 2020, also from Docket No. E002/GR-19-564, to determine a \$/kWh that would be required for that class to collect its portion of the accrual. Schedule F provides the result of this calculation for all accruals provided in Schedule E.

## VIII. EOL NUCLEAR FUEL

At the time each nuclear unit is shut down, there will be nuclear fuel remaining in the reactor that has not been fully utilized. We refer to this unused fuel as end-of-life (EOL) nuclear fuel. The unused fuel cannot be transferred to another facility, and the amortization expense for said fuel would have to be taken at the end of operations at each unit. To avoid this spike in amortization at the end of the useful life of each unit, the Company estimates the expected cost of unused fuel at the end of operations and amortizes the expense over the remaining life of each unit. This is done using a sinking fund method.

The Company recommends a decrease to the annual internal accrual for EOL nuclear fuel for this triennial filing. The Company is proposing to change the 2022 accrual based on the new EOL nuclear fuel factors discussed in Schedule G. The Minnesota jurisdictional annual accrual for 2022 is requested to be \$714,366. This is a decrease of \$1,591,993 over the accrual based on the factors approved in the 2017 Filing.

This recommended decrease stems mainly from an update in the estimates of the cost of the final fuel at shutdown. The estimated amount to be recovered decreased approximately \$38 million from the estimate used in the 2017 Filing. The decrease was primarily the result of leveling of \$/MWh through optimization of the multi-cycle core fuel designs close to EOLL, primarily at Prairie Island Unit 2, and lower projected nuclear fuel commodity prices in the future. The 2022 accrual worksheet detailing the calculation is included in Schedule G.

## IX. PREMATURE RISK INVESTIGATION

In previous Orders, the Commission has directed the Company to provide an investigation of premature risk in its Triennial Nuclear Decommissioning Accrual filings.<sup>17</sup> Consistent with the Commission's prior orders, our investigation included the following aspects of the risks of premature decommissioning:

- The availability of commercial insurance.
- The availability of electric industry co-insurance.
- Any programs, which may be proposed, mandated, or administered by the NRC or any other United States Government agency.

---

<sup>17</sup> *In the Matter of the Petition of Northern States Power Company d/b/a Xcel Energy for Approval of the 2012-2014 Triennial Nuclear Plant Decommissioning Accrual*, Docket No. E002/M-11-939, Order Approving Decommissioning Plan and Modifying Refund Plan, (Dec. 4, 2012).

- Specific detailed information pertaining to any steps the Company has taken to minimize any possible loss, which may occur as a result of premature decommissioning.
- The Company's ability to withstand possible economic and financial trauma, which may be associated with premature decommissioning.

Schedule H contains the regular response to that request. It addresses accident and non-accident related premature decommissioning of nuclear generating facilities. Presently, insurance is unavailable for non-accident related premature decommissioning such as those caused by regulatory directives. Therefore, the insurance analysis deals with accidents.

The Company's property insurance coverage of \$2.65 billion would largely offset the potential impact of an accident-related decommissioning. Although accident-related decommissioning expenses are significant, the length of time involved in a clean-up process, insurance payments, tax deductibility of expenses, and related rate relief would affect the yearly expense. Although accident related premature decommissioning would affect both the Company and its customers, it is anticipated that, with acceptable regulatory decisions, the financial integrity of the Company would be maintained.

## **X. ASSET RETIREMENT OBLIGATION**

The implementation of the Statement of Financial Accounting Standards No. 143 (SFAS 143), *Accounting for Asset Retirement Obligations* (ARO) in January of 2003 brought some changes to the accrual accounting for decommissioning. Financial Accounting Standards Board (FASB) Interpretation No. 47 (FIN 47), *Accounting for Conditional Asset Retirement Obligations* was released in March 2005. These statements are both included within the FASB Accounting Standards Codification (ASC) 410 *Asset Retirement and Environmental Obligations*. This Interpretation of the conditionality of an ARO has resulted in some additional accounting analysis for many of the fixed assets at the Company. Nuclear decommissioning was never assumed to be conditional in nature, thus the ARO accounting for nuclear decommissioning established in 2003 is unaffected by this Interpretation. Nonetheless, a summary of the ARO accounting for nuclear decommissioning is included in Schedule I for reference. This section is provided in response to the Commission's Order Point 9. from the 2017 Filing.

## CONCLUSION

Xcel Energy respectfully requests the Commission approve our Petition for Approval of the 2022-2024 Nuclear Decommissioning Accrual. As described in this filing, we specifically request Commission approval of:

- Approve our decommissioning study and assumptions as compliant with the Company's obligations under Minnesota statutes, Commission rules, and prior precedent;
- Continue allocation of DOE settlement funds to the NDT;
- Approve an accrual of \$31,368,901 effective in 2022 to meet the needs of the Company's 60-year spent fuel scenario, with no recasking of the fuel, for 2022 through 2024 while strategic decisions about the future of our nuclear units are decided in our 2019 IRP;
- Approve an annual accrual of \$0.7 million for EOL nuclear fuel for the calendar year 2022 through 2024; and
- Approve the proposed asset allocation for the NDT.

The next decommissioning filing would be for the calendar years 2025 through 2027 with the submittal due December 1, 2023.

Dated: December 1, 2020

Northern States Power Company

STATE OF MINNESOTA  
BEFORE THE  
MINNESOTA PUBLIC UTILITIES COMMISSION

Katie J. Sieben	Chair

Matthew Schuerger	Commissioner
Joseph K. Sullivan	Commissioner
John A. Tuma	Commissioner

IN THE MATTER OF THE PETITION OF  
NORTHERN STATES POWER COMPANY  
FOR APPROVAL OF THE 2022-2024  
TRIENNIAL NUCLEAR DECOMMISSIONING  
STUDY & ASSUMPTIONS

DOCKET NO. E002/M-20-\_\_\_\_

**SUMMARY**

**SUMMARY OF FILING**

Please take notice that on December 1, 2020, Northern States Power Company, doing business as Xcel Energy, filed with the Minnesota Public Utilities Commission its Petition for approval of its Triennial Nuclear Decommissioning Study and Assumptions. In this Petition the Company analyzed several decommissioning scenarios and calculated a number of different accruals. The resulting accrual calculations range from an \$8.6 million reduction to an increase of \$207.5 million.

The full version of this filing can be found by searching the Department of Commerce’s eFiling website:

<https://www.edockets.state.mn.us/EFiling/edockets/searchDocuments.do?method=showDocketsSearch&showEdocket=true&userType=public>.

A docket number has not yet been assigned, but the filing can be found by searching the Received Date: December 1, 2020, and On Behalf Of: Xcel Energy.

**CERTIFICATE OF SERVICE**

I, Paget Pengelly, hereby certify that I have this day served copies or summaries of the foregoing document on the attached list of persons.

- xx by depositing a true and correct copy thereof, properly enveloped with postage paid in the United States Mail at Minneapolis, Minnesota
- xx electronic filing

**Docket No.           E002/M-17-828**  
**Xcel Energy's Miscellaneous Electric Service List**

Dated this 1<sup>st</sup> day of December 2020

The cost estimates developed and presented in this decommissioning filing are based on numerous fundamental assumptions, including regulatory requirements, project contingencies, low-level radioactive waste disposal practices, high-level radioactive waste management options, and site restoration requirements. There are four fuel storage options and two dismantling options presented for each facility. Additionally, new to this filing, we have received cost estimates assuming a 10 year life extension at the Monticello facility. Thus, there are twelve cost estimates for Monticello and eight cost estimates for Prairie Island provided with this filing.

As required by Minnesota statutes, a variety of cost studies were created, in order to address the possibility of delays in the DOE acceptance of spent fuel. The Company is required by statute to submit at least three cost scenarios, 60-year, 100-year, and 200-year scenarios. The length of these scenarios is the longest period of time measured from the start of shutdown until all spent fuel is removed from the locations. The 100-year and the 200-year dry cask operational period scenarios assume that the fuel will be re-casked every 50-years.

In the 2017 Filing, the Company provided scenarios using the DECON and SAFSTOR decommissioning alternative. This filing is consistent with the 2017 Filing in that it provides scenarios for both decommissioning alternatives. This filing provides four DECON scenarios and four SAFSTOR scenarios. For this filing, the Company assumed approximately four years of wet storage based on a conservative estimate of the capabilities of casks currently on the market. For the remainder of this period, the fuel will be stored in dry storage and the pool will no longer be required. This results in a significant decrease in the amount of security staff required at the site.

As a basis for these cost estimates, TLG uses a systems and structural inventory database, which in 1999, was revised for both nuclear facilities. The Company has reviewed and made minor changes to this inventory in the current filing. Other items provided as input are property and sales tax assumptions, insurance levels, burial rates, recycling practices, license termination dates, department budgets, purchased power and oil costs, incidental costs and meteorological data. These are all input to a process that will estimate the total dollar amount for decontaminating, removing, packaging, shipping, and disposing of the two nuclear sites. These cost estimates include labor rates for both salaried staff and union craft people. All labor is provided with loadings such as pension, unemployment, workers compensation, and medical where applicable. An estimate for employee retention costs also was included in the estimate to account for the additional expense the Company expects to incur in order to insure it retains the staffing

required for the plant in the early post shutdown stage while fuel remains in the pool. Xcel Energy also reviewed the organizational structure and numbers of employees for the salaried staff input.

Briefly, the decommissioning process is broken down into several main categories of work that are performed in various periods throughout the decommissioning depending on the dismantling method and the fuel storage assumptions, as follows:

Preparation – Site preparation, engineering and planning of detailed procedures, performing various surveys, implementing the staffing transition plan, organizing the staff required to manage the intended decommissioning activities from available plant staff and outside resources, and submitting filings to regulatory entities.

Fuel Storage – Packaging the fuel in dry cask canisters, loading the canisters to the storage pad, building a fuel transfer facility, re-casking every 50 years for some cost estimates.

Dormancy – For SAFSTOR only, this is the period following unit shutdown where structures and systems not necessary for the operation or support of spent fuel pool and site security and surveillance are drained, de-energized, and secured. Minimal maintenance, sanitation, and sealing is performed to allow the facility to be maintained in an inactive state until delayed decommissioning activities commence. Only inspection, maintenance and security/surveillance activities are occurring during this period.

Decommissioning operations – a constructing additional facilities for cask storage, transferring all spent fuel to dry casks, modifications to site structures and facilities, decontamination, removal, packaging, shipping, and burial of all contaminated and activated components and structures. By the end of this work all radioactive or contaminated material from the plant has been removed, but the fuel may still be onsite.

Site Restoration – The demolition of remaining structures, site restoration, and license termination.

All cost estimate numbers are provided in instant dollars, which means that costs for the same activity from one year to the next do not increase due to inflation.

For example, the salary for an engineer is the same in the first year and all subsequent years. The time value impact of inflation is brought into the equation in the accrual calculation worksheet.

In Summary, the Company has computed various decommissioning accruals using the DECON and SAFSTOR scenarios assuming a 42-year (no re-casking), 60-year (no re-casking), 100-year (with re-casking), and 200-year (with re-casking) dry cask storage operational period.

### **SAFSTOR Method of Decommissioning**

SAFSTOR is defined in the U.S. Code of Federal Regulations, Title 10, Parts 30, 40, 50, 51, 70, and 72, as “the alternative in which the nuclear facility is placed and maintained in a condition that allows the nuclear facility to be safely stored and subsequently decontaminated (deferred decontamination) to levels that permit release for unrestricted use.” Under this cost estimate decommissioning activities will commence about 50 years after the cessation of operations and will be completed within 60 years. Many plants entering SAFSTOR have stated they do not intend to take the full 60 years but will finish decommissioning when economically viable.

SAFSTOR has begun to be pursued by a number of plant operators as they have entered shutdown. The primary reason for this shift is the increased earnings in the fund when a large majority of the expenditures are pushed further out into the future, which allows for smaller annual accruals during operation. To the extent that the after-tax return of the fund out paces the sum of the annual escalation and costs to tend the facility during dormancy, the required contributions by rate payers will be decreased over a DECON method. Over a 50 year dormancy period, this impact becomes substantial based upon current estimates.

The salaried staff presented in the cost estimate is not necessarily assumed to be the staff of Xcel Energy. This assumption is due to the length of the wait period, now being 50 years, and the fact that the employees with nuclear experience currently employed within Xcel Energy will be enjoying retirement and not available for decommissioning work. Thus, the cost estimate assumes a Decommissioning Operations Contractor (DOC), which is an independent entity that oversees the decommissioning work and provides the required salaried employees.

A more detailed description of the cost estimation process is included in the accompanying two volumes. TLG has provided a written outline of the procedures as well as worksheets that delineate the costs per activity, per period.

### **DECON Method of Decommissioning**

DECON is defined in the U.S. Code of Federal Regulations, Title 10, Parts 30, 40, 50, 51, 70, and 72, as “the alternative in which the equipment, structures, and portions of a facility and site containing radioactive contaminants are removed or decontaminated to a level that permits the property to be released for unrestricted use shortly after cessation of operations.”

Under this cost estimate decommissioning activities will commence as soon as possible after the cessation of operations. The last fuel assemblies will be sufficiently cooled and can be removed from the spent fuel pool and placed in dry casks after about five years.

DECON has been the preferred method of decommissioning for most situations. It is generally favorable because it eliminates the costs for caretaking, other than those related to the ISFSI. The cost estimate places most of the major expenditures more towards the front end of the decommissioning schedule. This is a major advantage because the individuals familiar with the operation of the facility are available to support the dismantling effort, plant systems and services are fully functional, structural integrity is intact, and licensee has a comprehensive management organization available to oversee and conduct the orderly decommissioning and decontamination.

### **Comparison to 2017 Filing**

An extended time period of spent fuel management has multiple impacts including a significant increase in labor costs and extends the period of cost escalation, which creates a higher risk over time. The Company has escalated the 60-year DECON cost estimate from the 2017 Filing in the Table 1 below and compared it to the 2020 cost estimate simply to show that the cost estimates were similar and in line with the changes expected from inflation. The comparison table inflates the 2017 Filing cost estimate using the last approved escalation rate for labor and non-labor activities of 4.03 percent and 2.83%, respectively.

**Table 1**  
**Comparison of Current No-Recasking Cost Estimate to Previous Filing**  
**60-Year Scenario (DECON)**

	2017 Study in 2020 Dollars	2020 Cost Estimate
Monticello	\$1,680,978,400	\$1,612,762,003
Prairie Island Unit 1	1,097,692,104	1,017,864,701
Prairie Island Unit 2	1,099,367,680	1,029,940,789
	<b>\$3,878,038,184</b>	<b>\$3,660,567,493</b>

One of the largest changes from the 2017 cost estimate to the 2020 cost estimate was the amount of time the Company anticipates needing to operate the spent fuel pool after shutdown from 5 years to 4 years. The company asked for this change and feels it is still a conservative estimate, as industry peers are transferring spent fuel in as few as 2 years. Given the above driver, the current estimate is decreased, which aligns with the inflated 2017 Filing cost estimate.

Table 2 shows the attachments that provide the yearly cost estimate detail for the seven cost estimates for each facility. Theses summaries show the costs for the radiological decommissioning, the spent fuel management costs, site restoration, and the ISFSI decommissioning. The entire TLG cost estimate documentation is provided in Schedule L for Monticello, Schedule M for Prairie Island, and Schedule N for the Monticello 10 year license extension.

### **NRC Minimum**

The NRC minimum required funding amounts, based upon the new information from NUREG-1307, Revision 16, and the most recent statistics for comparison to the new cost estimates have been calculated. Under the NRC minimum calculation requirements, the Company must show that it will meet the minimum cost calculated under at least one of the two burial options allowed: Direct Burial and Blended Burial. The Blended Burial NRC minimum calculations are less than all scenarios of our 2020 cost estimates in total. Table 3 shows lists the support schedules for the information for the calculation of the NRC minimum.

**Table 3**  
**NRC Minimum Calculation Supporting Schedules**

A.21	NRC Minimum Historical Escalation
A.22	NRC Minimum Calculation

### **Property Taxes Included in Cost Estimates**

Taxation of utility property is fundamentally different than taxation of the property owned by any other business. Like other businesses, we pay property taxes on the value of the land we own, the buildings attached thereto, and rights-of-way. This property is all assessed at the local level. Unlike other businesses, however, we are also assessed property taxes on personal property. Specifically, we are required to pay property taxes on Operating Property, which is defined as “any tangible property that is owned or leased, except land, which is directly

Xcel Energy  
Cost Estimate SummaryDocket No. E002/M-20-\_\_\_\_  
Schedule A.0  
Page 8 of 10

associated with the generation, transmission, or distribution of electricity [or] natural gas....” Minn. R. 8100.0100, subp. 11.

In Minnesota, the Department of Revenue (DOR) values all of the Company’s operating property in Minnesota, as well as its gas and electric operating property that extends into North Dakota and South Dakota. Each type of property is valued as one integrated system, or unit. When the system value for each type (electric or natural gas) is determined, an allocation is then made to reflect how much of the system value is attributable to Minnesota. Allocation is based on a combination of original cost of the property in Minnesota to total system cost, as well as gross revenue in Minnesota to total system revenue.

Deductions are then made to subtract property locally assessed (land and some buildings) and exemptions (e.g., sliding scale exemption for generation efficiency, pollution control, etc.). The resulting value is then apportioned to the various taxing districts based on the original cost of the property located in those districts.

Local taxing districts then combine the market value apportioned to them with the value of the Company’s locally assessed property to arrive at our tax base within the taxing district’s jurisdiction. Finally, each jurisdiction then applies its own individual property tax rate to our tax base to determine our property tax liability in that jurisdiction.

As we make new investments in personal property throughout our integrated system, the market value upon which property taxes are assessed increases. This increased market value is then apportioned to the local jurisdictions that host our Monticello and Prairie Island plants. In 2017, the Company paid \$17.9 million in real and personal property taxes related to Monticello and \$24.7 million for Prairie Island. In 2018, the Company paid \$18.7 million in property taxes related to Monticello and \$26.8 million for Prairie Island. When operations at these nuclear plants cease, the operating property will be removed from the sites and will no longer be included in the DOR’s market valuation. This will result in a reduction in property taxes paid when operations cease, but the property for the ISFSI will continue to be locally assessed. For the decommissioning cost estimates, the land, structures, and the dry cask portion of the operating property taxes were assumed to continue with the structures component lasting until the structures are decommissioned and removed.

The property tax amounts for Monticello and Prairie Island provided in the decommissioning cost estimate were based on the actual liabilities paid in 2019. The Company’s consultant developed the future property tax estimates for after

plant shut down based on the actual property taxes paid for the Prairie Island (\$23.2 million) and Monticello (\$18.4 million). Table 4 shows the change in property taxes from operations to decommissioning.

**Table 4**  
**Property Tax Estimates**

	During Operations	Plant Shutdown	Plant Structures Removed
<b>Prairie Island</b>			
Land	\$216,242	\$216,242	\$216,242
Structure	5,765,693	5,765,693	0
Substation	397,824	0	0
ISFSI	2,598,788	2,598,788	2,598,788
Generation Machinery	14,205,814	0	0
Total	\$23,184,361	\$8,580,723	\$2,815,030
<b>Monticello</b>			
Land	\$517,757	\$517,757	\$517,757
Structure	3,675,271	3,675,271	0
Substation	284,764	0	0
ISFSI	533,686	533,686	533,686
Generation Machinery	13,385,394	0	0
Total	\$18,396,873	\$4,726,715	\$1,051,443

The process used in the current property tax cost estimates is the same as the method used in our 2017 Filing. In addition, we note that there is no double recovery of property taxes between the decommissioning accrual and those included in current rates. The collection of funds from customers today for the payment of future tax obligations does not relate to the current year property tax expense.

### **Spent Fuel Management Costs**

The cost estimates include the operating and maintenance of the ISFSI from shutdown through when all the fuel has been removed from the site. Schedules A.1 through A.20 show the annual costs in total spent fuel management costs by unit. Schedule A.23 breaks the spent fuel management costs down into its cost components such as utility staff, property taxes, and operating costs.

**Xcel Energy  
 NRC Minimum Historical Escalation**

**Docket No. E002/M-20-\_\_\_\_  
 Schedule A.21  
 Page 1 of 1**

January 1986 to January 2020

**1. Determine Most Recent Escalation Component**

	Base Conversion 1986	Value (2005 4Q - 19 (Dec base) '05 Base)	Base Labor Adjustment Factor	Current Labor Adjustment Factor	
	(1)	(2)	(3)	(4)	
	(1)	(2)	(3)	(4)	
Labor (L)	48.1	100.00	135.7	2.08	2.82

Dept of Labor, Bureau of Labor Statistics, Employment Cost Index (NAICS), 4th Qtr 2019 (Retrieved May 2020), Private industry, Midwest region

Industrial Power (P)	114.2			232.5	2.036
Light Fuel Oil (F)	82.0			219.5	2.677

Department of Labor, Bureau of Labor Statistics, Producer Price Index Data for December 2019 (Retrieved May 2020); Industrial Power from Commodity code 0543, 500 kw demand, Midwest Region; Light Fuel Oils from Commodity code 0573

Burial (B)					
PWR - Combination of Compact-Affiliated and Non-Compact Facility					12.853
BWR - Combination of Compact-Affiliated and Non-Compact Facility					13.422

NUREG 1307, Report on Waste Burial, Revision 17 (Table 2.1 in February 2019)

**2. Calculate Energy Component (E)**

	Equation	Industrial Power	Light Fuel Oil	Energy Component
Energy (PWR)	= .58(P) + .42(F)	2.036	2.677	2.305
Energy (BWR)	= .54(P) + .46(F)	2.036	2.677	2.331

**3. Calculate NRC Escalation Factor as of June 2017**

	Labor (L)	Energy (E)	Burial (B)	NRC Escalation Factor (6)
PWR - Blended	2.821	2.305	12.853	4.9611
BWR - Blended	2.821	2.331	13.422	5.0896

**Notes:**

- (1) = Base values from NRC Proposed Guidelines
- (2) = Conversion factor to convert from 1986 base to 2005 base.
- (3) = The most recent published value:
- (4) = (2) / (1), Labor only
- (5) = (4) \* (3) for Labor, Industrial Power, and Light Fuel Oil
- (6) = (.65 x L) + (.13 x E) + (.22 x B)

Xcel Energy  
 NRC Minimum Calculation

Docket No. E002/M-20-\_\_\_\_  
 Schedule A.22  
 Page 1 of 1

January 1986 to January 2020

**1. NRC Minimum Calculation in 1986 Dollars**

	Equation	MWt	1986 Minimum Calculation
Monticello (BWR)	= \$104 million + (0.009 * MWt)	2004	122,036,000
Prairie Island (PWR), Unit 1	= \$75 million + (0.0088 * MWt)	1677	89,757,600
Prairie Island (PWR), Unit 2	= \$75 million + (0.0088 * MWt)	1677	89,757,600

**2. NRC Minimum Calculation in 2019 Dollars - Combination of Facilities**

	1986 Minimum Calculation	Escalation Rate	2019 Minimum Calculation (Blended)
Monticello (BWR)	122,036,000	5.0896	621,116,682
Prairie Island (PWR), Unit 1	89,757,600	4.9611	445,296,938
Prairie Island (PWR), Unit 2	89,757,600	4.9611	445,296,938

## Introduction

The escalation rate for decommissioning costs is an important element in determining the appropriate investment strategy, funding contributions, and the computation of the annual nuclear decommissioning external sinking fund accrual. This rate is used to inflate the 2020 decommissioning cost estimate out to the time that expenditures are predicted to occur. Since the decommissioning costs were provided by TLG in 2020 dollars (i.e., they are real costs), the escalation rate considers only the projected increases in costs from 2020 out to the estimated years of the final decommissioning expenditures. To arrive at these projections, long-range inflation and escalation assumptions are independently provided by Goldman Sachs Asset Management (GSAM).

## Economic Forecast

The trend projection used for escalation is a baseline scenario based on a steady long-term real Gross Domestic Product (GDP) growth of 2.0 percent. The projection assumes that the economy suffers no major long-term mishaps, but grows smoothly, in the sense that actual output follows potential output relatively closely. This projection is best described as depicting the assumed mean of all possible paths that the economy could follow in the absence of major long-term disruptions. Such disruptions include large oil price shocks, untoward and persistent swings in macroeconomic policy, major international crises or excessively rapid increases in demand. The trend projection can be considered an unbiased reflection of the future performance of the economy. The real GDP forecast of 2.0 percent is slightly below the 3.1 percent average since 1947.

For the 60-Year Scenario, the 2020 decommissioning cost for Monticello and Prairie Island generating plants depict an overall expenditure period from 2033 to 2078 for the Prairie Island plant and from 2030 to 2091 for the Monticello plant. The expenditure pattern for this scenario requires the estimation of an escalation rate to 2091.

## Inflation Factors

Inflation is the decrease in the purchasing power of money or the increase in the prices of goods and services. However, decommissioning is a unique combination of functions with many operations that are not performed often in

Xcel Energy  
Escalation AnalysisDocket No. E002/M-20-\_\_\_\_  
Schedule B  
Page 2 of 5

industry, and it may be more consistent to use a decommissioning-specific inflation factor rather than a general rate of inflation.

GSAM has refined the analysis surrounding the calculation of the escalation rate and believes its methodology provides an appropriate estimate. TLG provides a detailed decommissioning cost estimate that is site specific for the units at Monticello and Prairie Island. These site-specific decommissioning cost components need only be linked with appropriate escalation.

Escalation is broken down into two components: inflation and non-inflation escalation. Non-inflation escalation reflects idiosyncratic costs for decommissioning nuclear power plants, above and beyond the escalation associated with inflation.

The long-term escalation rates used in this analysis are as follows

Escalation Component	Trend Projection
Expected Inflation	1.58%
Non-inflation escalation (Non-labor costs)	1.00%
<b>Total escalation (Non-labor costs)</b>	<b>2.58%</b>
Non-inflation escalation (Labor costs)	2.20%
<b>Total escalation (Labor costs)</b>	<b>3.78%</b>

Long-term expected inflation is assumed to be 1.58 percent, which is estimated from the expected inflation implied in long-term US treasury rates. The long-term risk-free (treasury) rate is observed to be 1.41 percent and the observed long-term Treasury Inflation Protected Securities (TIPS) yield (proxy for assuming the long-term real rate of interest) is -0.16 percent. These imply expected inflation of 1.58 percent as the market cost to offset inflation. Non-inflation escalation is assumed to be 1.00 percent for non-labor costs, but 2.20% for labor costs.

The overall escalation rates in the above table should be compared with the 4.05% rate for labor and 2.85% for non-labor in the 2017 analysis, 4.36 percent escalation rate in the 2014 analysis, 3.63 percent escalation rate in the 2011 analysis and the escalation rate of 2.89 percent from the 2008 analysis.

### Decommissioning Cost Breakdown and Escalation

GSAM related the calculation of the escalation rate to the detailed cost categories provided by TLG. The TLG cost estimates are divided into five

components or categories: labor, equipment & materials, energy, LLRW disposal, and other. GSAM began its forecast by separating labor from the other four categories of costs.

Inflation is the general increase in all prices across the economy. If all costs in every industry were analyzed, in aggregate they must increase by inflation. Therefore, an assumption of costs growing by more than inflation requires that other costs somewhere are growing less. We assume that the non-labor parts of the decommissioning costs grow at one percent more than inflation. In general, this increase would constitute a conservative assumption. However, given regulatory uncertainty and the complexities of forecasting technical change, the assumption that other costs grow faster than inflation seems reasonable. Historically, the escalation of nuclear decommissioning costs based on NRC filings and on engineer reports as reported in the Callan study<sup>1</sup> appears to have been substantially greater than inflation. Median escalation rates for all plants reviewed as part of the study are currently 3.24%.

According to economic theory, labor costs increase by inflation plus productivity (merit). We have assumed merit increases are 1.2 percent per year, consistent with a 2.00 percent long-term real GDP growth and an assumption that labor productivity accounts for 60 percent of GDP growth. Labor's share of GDP has varied since 1950 between 59 and 65 percent.

In the 2014 triennial filing, an average escalation rate was calculated and used to escalate all costs based on the percentage of costs coming from labor. In the 2017 triennial filing, the two different escalation rates were applied to labor and non-labor costs separately, which should be more precise than the previous approach. The 2017 and the 2020 triennial filings contain an additional third category for the Prairie Island Indian Community (PIIC) payments because they are determined by a settlement agreement that does not contain a provision for escalation beyond their current nominal amounts. These Labor, Non-Labor, and PIIC groups of cash flows are shown separately on Schedule F for the 2020 filing based upon the respective escalation rate applied.

### **Application of the Escalation Rate**

A critical aspect of the valuation procedure is to ensure that assumptions are consistent between asset and liability growth. The analysis assumes that:

---

<sup>1</sup> Callan 2019 Nuclear Decommissioning Funding Study

Expected cost (liability) growth = inflation + non-inflation escalation

Expected pre-tax asset returns = inflation + real interest rate  
+ risk premium

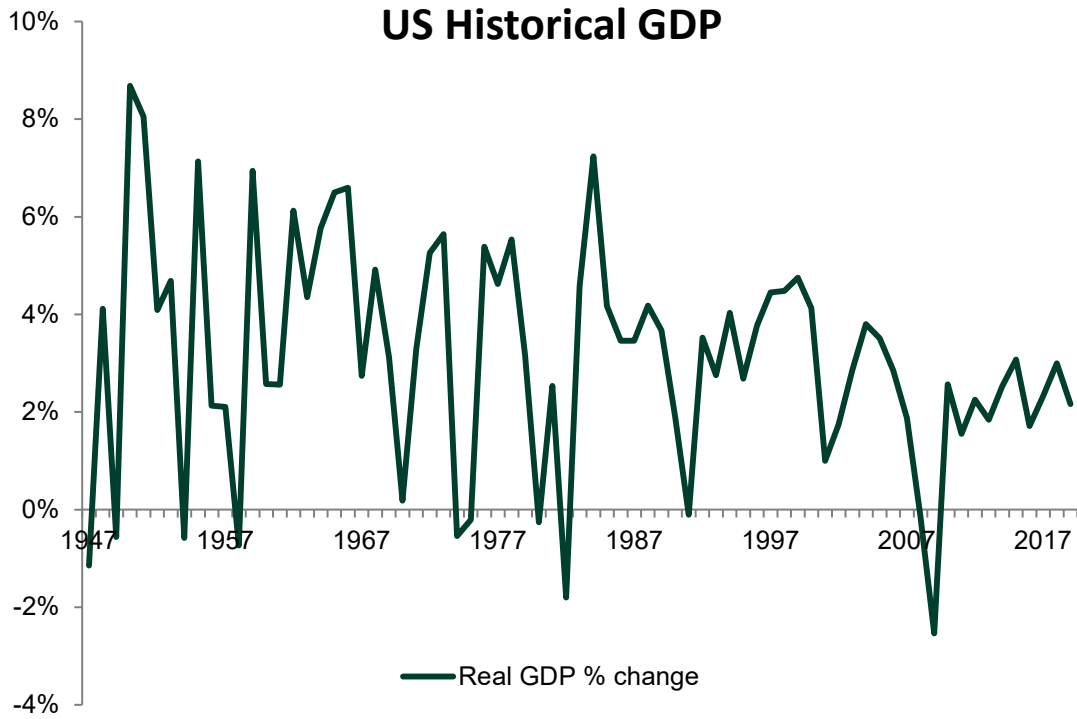

Note that inflation increases both pre-tax asset returns and decommissioning costs (i.e., the liability) equally. Thus, in the absence of taxes, inflation would be neutral to the valuation, which is consistent with economic theory based on real liability cash flows. The introduction of taxes, however, changes the analysis somewhat. Taxation means that lower inflation helps improve funded status, as the reduction in liability escalation will exceed the reduction in the after-tax asset return.

The other variables, however, have major implications for the analysis, since they are not offset in the same way as inflation. In general, the most important variables are non-inflation escalation, the real rate of interest, and the risk premium associated with the growth portfolio assets.

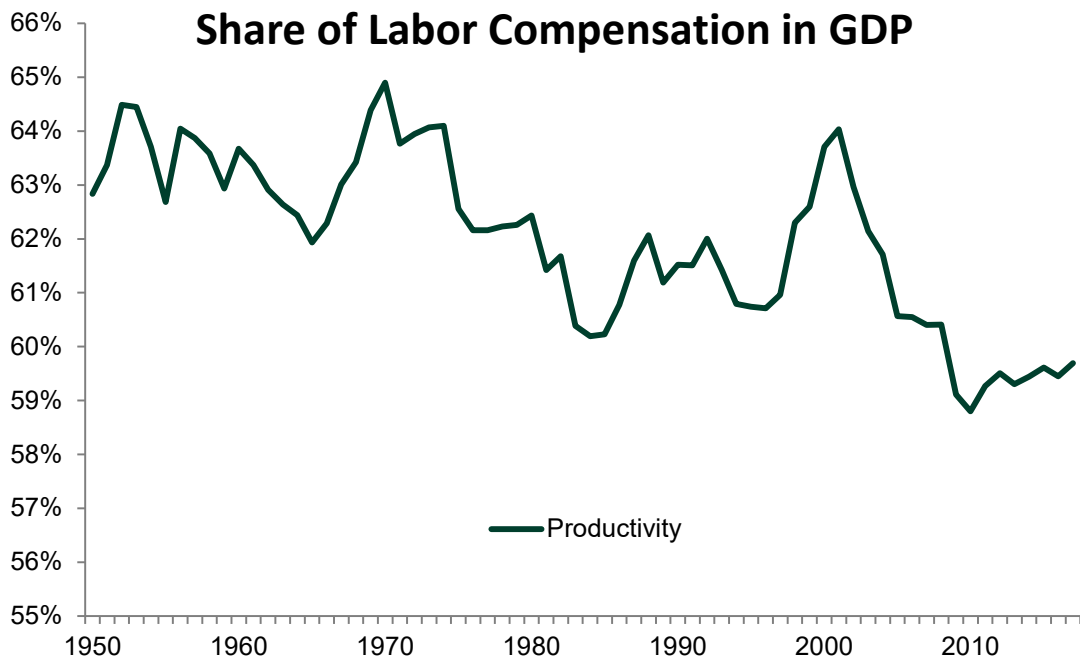

### **Historical Real GDP and Labor Productivity**

In order to provide some context for the escalation assumptions presented above, below we present charts of historical real GDP and labor productivity for the US economy.

Analysis indicates that the real GDP growth assumption of 2.0 percent and labor share of GDP assumption of 60% are reasonable long-term forecasts.

## Background

Per Commission Orders, beginning with Docket No. E002/D-86-604 and through subsequent dockets, the Company is required to review the financial parameters, the funding methodology, and cost estimate every three years. In between triennial filings, the Company submits an Informational Letter annually discussing NDT performance.

Since the nuclear power plants deliver power across state lines, each state is responsible for its share of the plants' ownership/use, and as such, its share of decommissioning cost. Based upon the demand of Minnesota Retail customers, Xcel Energy estimates that Minnesota's usage of the plants is 72.9219 percent. However, the engineering reports and asset-liability analysis, which use the engineering reports, do not distinguish between jurisdictions. Likewise, the analyses referred to in this schedule are performed on a total plant basis, and the figures are allocated to Minnesota by multiplying figures by 72.9219 percent.

There are references in this schedule to both the total across all jurisdictions (Total Company) and the MN Jurisdiction for various figures. References to the MN jurisdiction generally correspond to the Total Company multiplied by 72.9219 percent.

## Recent Portfolio Updates

As discussed in previous triennial dockets, the Company's NDT Committee routinely evaluates both the NDT's performance and the overall investment strategy for the NDT (including its asset allocation), and it revises both the strategy and allocation as necessary.

Since the 2017 triennial filing no asset classes have been removed or added, however small adjustments to the weights of the portfolio have changed somewhat as a result of updates to capital market assumptions and forward looking expectations. The main changes since 2017 have been an increased weight in US equities, decreased weight in non-US equities, increase in investment grade fixed income and decrease in high yield and emerging market debt. We believe these updates have helped the portfolio performance, particularly during 2020. Xcel's private investments have been some of the best performing asset classes for the portfolio, and we expanded the target to private real estate since we expect to make further commitments there.

The 2017 and updated 2020 target asset allocations are included below for comparison:

Portfolio Line Item	2017 Target	2020 Target
Total Equity	60.0%	58.0%
Private Equity	10.0%	10.0%
US All Cap Equity	25.8%	27.9%
Non-US Developed Equity	14.1%	12.6%
Emerging Markets Equity	10.1%	7.5%
Fixed Income	30.0%	30.0%
Investment Grade Fixed Income	12.1%	19.0%
High Yield Fixed Income	10.0%	5.0%
Emerging Market Debt	7.9%	6.0%
Private Real Estate	10.0%	12.0%
Cash	0.0%	0.0%
<b>Overall fund benchmark:</b>	<b>100.0%</b>	<b>100.0%</b>

## Trustee

BNY Mellon is the trustee for Xcel Energy's three external nuclear decommissioning Qualified Trusts (in aggregate the NDT). The primary duty of the trustee is the safe custody of its assets including handling the settlement of all purchases and sales, whether placed by the trustee or by an independent investment manager. The trustee has limited investment duties other than the responsibility for keeping cash balances temporarily invested. Other duties include paying income taxes on the earnings of the Qualified Trusts, paying invoices for services for the trust and investment managers, conducting investment performance reporting, and keeping accurate records of all of its activities with respect to the Qualified Trusts.

## Investment Managers

Following regulatory approval of the life extension of the Monticello and Prairie Island nuclear generating plants, the Xcel Energy's NDT portfolio was updated to reflect a longer time horizon and a more diversified, higher risk, long-term investment strategy.

Since the 2017 triennial filing, the manager line-up was updated as a result of a change in emerging market equity managers, but has otherwise remained

consistent. The portfolio includes nine investment managers covering eight asset categories. Those asset managers and mandates include:

1. StepStone Group manages the private equity component of the portfolio.
2. Parametric Portfolio Advisors, a subsidiary of Eaton Vance Management, manages the U.S. equity component of the portfolio, and a portion of the non-U.S. developed market equity component of the portfolio. Parametric utilizes tax-efficient strategies with respect to the whole trust.
3. Axiom Investors manages a portion of the emerging market equity component of the portfolio.
4. Marathon International manages a portion of the non-U.S. developed market equity component of the portfolio
5. First Principles Capital Management manages the domestic investment grade fixed income component of the portfolio.
6. Eaton Vance Management manages the high yield fixed income component of the portfolio.
7. Wellington Management Company manages a portion of the emerging market equity and emerging markets fixed income components of the portfolio.
8. Marathon Asset Management manages a portion of the emerging markets fixed income component of the portfolio.
9. The Townsend Group manages the private real estate component of the portfolio.

Although the trusts are not subject to the Employee Retirement Income Security Act (ERISA), the company uses fiduciary standards similar to those imposed by ERISA for the management of the Trusts. A fiduciary as defined by the ERISA is any person who:

1. Exercises any discretionary control over the management of a plan or the management or disposition of its assets;
2. Renders investment advice for a fee with respect to the funds or property of a plan or has the authority to do so; or
3. Has any discretionary authority or responsibility in the administration of a plan.

Although Xcel Energy has established the general guidelines in the investment advisory contracts, the Company does not direct the purchase of individual investments. The investment managers, however, being fiduciaries to the NDT, must act in the best interests of the NDT.

## Earnings Evaluation

When making comparisons between market value and book value (original cost), the current market value of the Qualified Trusts less an allowance for assumed taxes is used because it represents the value of the securities if they were sold today. For accounting purposes, Xcel Energy records the actual purchase price of the investments. Quarterly, a market value adjustment journal entry is made to book any unrealized gains or losses to special regulatory accounts per SFAS No. 115, *Accounting for Certain Investments in Debt and Equity Securities (ASC 320 Investments-Debt and Equity Securities)*. The difference between market and book values represents the unrealized gains or losses. In addition, it should be noted that trustee fees, investment management fees, and income taxes also are paid from the Qualified Trusts, thereby impacting overall fund performance.

The trustee statements for the Qualified Trusts are a part of Schedule E and show the current holdings for the Qualified Trusts by operating unit and investment manager.

## Benchmark Portfolio Performance

It is standard practice in the investment industry to measure the performance of a diversified portfolio, like the NDT, by identifying benchmarks that are representative of each asset class comprising the portfolio, and then to benchmark the total portfolio to the weighted sum of the individual benchmarks.

The updated 2020 target asset allocation and associated benchmarks are included below:

Xcel Energy  
Portfolio AnalysisDocket No. E002/M-20-\_\_\_\_  
Schedule C  
Page 5 of 14

Portfolio Line Item	2020 Target	Benchmark (BM)
Total Equity	58.0%	Weighted average of equity BMs:
Private Equity	10.0%	Cambridge PE (1Q lagged)
US All Cap Equity	27.9%	Russell 3000
Non-US Developed Equity	12.6%	MSCI EAFE ND
Emerging Markets Equity	7.5%	MSCI EM ND
Fixed Income	30.0%	Weighted average of fixed income BMs:
Investment Grade Fixed Income	19.0%	75% Barclays Investment Grade Corporate Index, 25% Barclays U.S. TIPS 10+ year Index
High Yield Fixed Income	5.0%	BofA ML US High Yield
Emerging Market Debt	6.0%	JPM EM Bond Index GD
Private Real Estate	12.0%	NCREIF - ODCE (1Q lagged)
Cash	0.0%	Fed funds effective
<b>Overall fund benchmark:</b>	<b>100.0%</b>	<b>Weighted average of all portfolio BMs</b>

The focus of performance evaluation for the NDT should be at the overall fund benchmark level, given the portfolio is composed of several investment managers and assets classes that are designed to work together on the whole. The overall fund benchmark is comprised of the actual weights of each individual asset class benchmark as shown in the table above.

Both the performance of Xcel Energy's NDT asset portfolio and the performance of the weighted average overall fund benchmark are calculated by the trustee - an independent third party. Since benchmarks will be changed or updated over time, Xcel Energy will update the Commission with respect to future modifications as they become necessary.

### Analytical Method

There are two principal components to determining the overall strategy for the NDT:

1. Investment strategy (*i.e.*, the composition of the investment portfolio); and
2. Contributions strategy, (*i.e.*, the annual annuity payment amount required to fund the decommissioning costs).

First, the liability is calculated based on the projected decommissioning costs and the projected escalation of these costs through time. The valuation of the liability involves the following steps:

- i. obtaining the current decommissioning costs from TLG in real dollars;
- ii. escalation of the real decommissioning cash flows to account for realized and expected future inflation and non-inflation escalation; and
- iii. calculation of the present value of the escalated cash flows back to the valuation date, using the expected return on assets as the discount rate. For this analysis, the valuation date is June 30, 2020.

Second, the projected liability is compared to the projected value of the assets (investments) net of an allowance for taxes of the NDT.

### **Method – Determining Investment Strategy**

In light of the benefits of the Energy Policy Act of 1992 for nuclear decommissioning trust investment management, the Company has established a nuclear decommissioning investment policy with the goal to maximize after-tax portfolio returns and minimize aggregate portfolio risk for external fund investing. This policy was approved in the 1993 filing. Accomplishing this goal requires finding the combination of assets that optimizes the after-tax risk/return characteristics of the fund which leads to full funding in the expected case when taken in combination with the solved contributions.

GSAM was engaged by the Company to recommend an appropriate investment strategy for trust assets intended for the eventual decommissioning of the Prairie Island and Monticello nuclear generating plants.

This process is called asset allocation optimization. Different mixes of assets can produce hundreds, or even thousands, of alternative combinations of risk and returns. As a result, asset allocation techniques have been developed to evaluate the various possible asset mixes and determine those combinations that are likely to deliver optimal performance in terms of risk and return.

This process has been used to perform a long-term optimization of the asset allocation for the Company's investments. In any investment there is always a trade-off between risk and the expected rate of return on that investment. Typically, strategies with higher expected returns also come with higher risk and vice versa. The goal is to optimize the trade-off between risk and return over the long term. If on the one hand too little risk is taken, then there is a significant chance that the trust remains underfunded, necessitating very large contributions into the trust in later years. If on the other hand too much risk is taken, there is a risk of significant underfunding of the NDT in the future, or of overfunding of the NDT, which because of the difficulty of removing assets from the Qualified Trust is also undesirable.

### **Method – Determining Contributions**

Contributions are calculated in terms of the annual annuity payment amounts required to fund the difference between liabilities (the present value of decommissioning cash flows) and the projected asset level at the start of decommissioning.

The projected asset level in the future is calculated by applying the expected asset returns at any point in time to the pool of assets.

In the analysis, the liabilities are calculated as the present value of all the decommissioning costs. The present value is calculated in a two-stage process by:

1. Escalating the real decommissioning cash flows by the escalation factors discussed in Schedule C.
2. Discounting the escalated cash flows using the expected after-tax return on the asset portfolio.

As a result, the present value of the liabilities will depend on the escalation of the decommissioning costs and the expected return of the chosen investment portfolio. Because inflation impacts both the escalation of cash flows and the pre-tax discount rate, it only has a small impact on the value of the liabilities from the tax effects of changed inflation assumptions.

A measure of the degree to which assets will be able to meet the decommissioning cost liabilities is the funded status which is the ratio of the value of assets net of assumed taxes to the value of liabilities, expressed as a percentage.

## Assumptions – Overview

The assumption set that goes into the process involves three different types of assumptions which are developed in a consistent manner:

- *Investment assumptions.* These include long-term expected returns, volatilities (standard deviations of returns) and correlations for different types of assets.
- *Other economic assumptions.* These include assumptions for the long-term inflation rate and the long-term escalation of decommissioning costs.
- *Tax assumptions.* These include assumptions for state and federal tax rates and deductibility.

## Investment and Economic Assumptions

The development of consistent investment assumptions goes hand-in-hand with the development of other economic assumptions about inflation, interest rates, GDP growth, etc.

The return assumptions for each type of asset represent expected market returns for that asset class on a forward-looking basis. The assumptions reflect a blend of rigorous analysis of historical performance and the forward-looking views of the financial markets, as revealed through the yields on long term bonds, the price-earnings ratios of the major stock market indices, implied inflation expectations in TIPS, etc.

This methodology will produce more conservative expected rates of return than an analysis that looks simply at historical averages. The important distinction is that, in using this methodology, the expected asset return is tied to the inflation rate and overall risk-free rates, so at lower inflation and interest rates investors require lower rates of return. Current markets indicate much lower expected inflation over even long-term horizons than historical averages.

The inflation rate used for expected returns is matched to the inflation rate used for liability growth, enforcing the consistency of asset and liability assumptions.

Expected asset returns (on a pre-tax basis) are developed via a building-block approach that starts with the expected long-term real interest rate and expected long-term inflation. Together these two define the expected long-term nominal risk-free interest rate. Expected returns for different assets are then determined by adding appropriate risk premiums to this. In other words, we have the following relationship:

$$\begin{array}{l} \text{Expected net-of-fee, pre-tax} \\ \text{asset return} \end{array} = \begin{array}{l} \text{inflation} + \text{real interest rate} \\ + \text{risk premium} - \text{fees} \end{array}$$

The next step in the assumption setting process involves an analysis of historical risks and correlations of asset class returns to which subjective judgment is applied. The result of this analysis is incorporated into a risk matrix from which expected long-term risk premiums are estimated for each asset class.

The long-term nominal return expectations are then determined by combining the asset class risk premiums with expected inflation and real risk-free rate assumptions. As a final consideration, the nominal return assumptions are blended with current market conditions to develop long-term equilibrium expectations. The return and risk expectations for each asset class incorporate assumptions about historical return relationships, current financial market conditions and the degree of global capital market integration.

The assumptions pertaining to the volatility of investment returns are based on observed experience and calculated in terms of the standard deviation of historical asset returns.

The following table shows the expected return and volatility assumption inputs:

Xcel Energy  
Portfolio AnalysisDocket No. E002/M-20-\_\_\_\_  
Schedule C  
Page 10 of 14**Long-term Investment Assumptions for 2020 – Qualified Trust**

Asset class	Expected pre-tax		Expected after-tax	
	Arithmetic return	Volatility	Arithmetic return	Volatility
US All Cap Equity (Passive)	6.53%	15.23%	4.71%	10.99%
EAFE Equity (Passive)	6.85%	15.63%	4.95%	11.28%
EAFE Equity (Active)	7.03%	16.01%	5.07%	11.55%
EM Equity	9.43%	21.28%	6.81%	15.35%
IG Fixed Income (10+ yr TIPS constant maturity)	3.55%	10.72%	2.84%	8.58%
US Corporate Fixed Income	2.77%	5.27%	2.00%	3.80%
High Yield Debt	3.95%	9.13%	2.85%	6.59%
EM Debt	4.39%	9.81%	3.17%	7.08%
Private Equity	10.13%	22.70%	7.31%	16.38%
Private Real Estate	6.96%	19.10%	5.02%	13.78%

These expected return assumptions are based on an assumed long-term risk-free rate of 1.412%, consisting of a -0.164% real asset return and expected inflation of 1.576%, (rounded to 1.58%) based on market bond rates.

The correlations between the investment returns of different asset classes are important characteristics, in addition to the expected returns and the volatility of returns. Recent and long-term historical data are used as a guide to setting these parameters. The table below shows the correlations between asset returns used in the analysis.

**Long-Term Investment Return Correlations for 2020**

Asset class	1	2	3	4	5	6	7	8	9	10
1 US All Cap Equity (Passive)	1.00	0.85	0.83	0.71	0.17	0.34	0.63	0.46	0.86	0.53
2 EAFE Equity (Passive)	0.85	1.00	0.98	0.81	0.17	0.38	0.65	0.51	0.74	0.49
3 EAFE Equity (Active)	0.83	0.98	1.00	0.80	0.17	0.37	0.63	0.49	0.72	0.48
4 EM Equity	0.71	0.81	0.80	1.00	0.21	0.37	0.58	0.48	0.62	0.39
5 IG Fixed Income (10+ yr TIPS constant maturity)	0.17	0.17	0.17	0.21	1.00	0.67	0.18	0.42	0.12	0.28
6 US Corporate Fixed Income	0.34	0.38	0.37	0.37	0.67	1.00	0.54	0.61	0.26	0.42
7 High Yield Debt	0.63	0.65	0.63	0.58	0.18	0.54	1.00	0.61	0.50	0.49
8 EM Debt	0.46	0.51	0.49	0.48	0.42	0.61	0.61	1.00	0.38	0.39
9 Private Equity	0.86	0.74	0.72	0.62	0.12	0.26	0.50	0.38	1.00	0.50
10 Private Real Estate	0.53	0.49	0.48	0.39	0.28	0.42	0.49	0.39	0.50	1.00

**Taxation Assumptions**

The taxation assumptions, along with the investment and other economic assumptions are important inputs for both the asset allocation portion, and the overall analysis performed. The following table shows the applicable tax rates for the Qualified Trust.

Municipal bonds are assumed to be free of federal taxes. Therefore, only state taxes are imposed. In practice, some municipal bonds will be exempt from state taxes also, specifically municipal bonds issued by Minnesota, but these are assumed to be a small percentage of the portfolio.

Treasury bonds are exempt from state taxes. Therefore, treasuries are taxed only at the federal rate and not at the state tax rate.

The Company's view is that US stocks in the Qualified Trust do not earn a dividends' received deduction, therefore stock returns are assumed to be fully taxed.

Xcel Energy  
Portfolio AnalysisDocket No. E002/M-20-\_\_\_\_  
Schedule C  
Page 12 of 14

<b>Tax Element</b>	<b>Tax Rate</b>
Federal tax rate for the qualified trust	20%
State tax on both the qualified trust and escrow account <i>Note: State taxes are deductible from federal taxes.</i>	9.8%

As a result, the total tax rates are (assuming that investments are fully taxed – this is modified for municipal bonds and treasuries):

<b>Portfolio</b>	<b>Composite Tax Rate</b>
Qualified Trust	27.84%*

\*Calculation:  $20\% + 9.8\% (1-20\%)$

These tax assumptions are incorporated into the after-tax expected returns in the table of investment assumptions above.

## Results – Investment Strategy

The investment strategy is based on the use of an efficient risk-seeking portfolio (Growth Portfolio) for the majority of the investment period before decommissioning, and an efficient low-risk portfolio for the period just before decommissioning. The mix is determined by the following rule:

*Five years prior to each decommissioning cash flow, the portion of the growth assets that are required to make that payment is reallocated into bonds.*

This strategy is efficient from an asset-liability management perspective in order to reduce the risk that market volatility significantly reduces the value of this portion of the assets just when they are needed to make payments.

A period of five years is needed for assets to earn their long-term rate of return with some degree of confidence. As discussed above, year to year variation can be very large for high returning assets, and five years is needed to justify long-term assumptions. Therefore, as decommissioning payments come due at less than five years, the assumption is that the funds are switched to bonds. Further details related to the selection of a five-year bond conversion period are described below.

## Analysis of Bond Holding Period

Our analysis assumes that the funds are invested in bonds as a cash outlay is approached. For each expected annual outflow cash flow, assets are converted to bonds ahead of time to give more certainty to the ability to make the payment. It is important to recognize that not all funds are converted to bonds – only enough to cover each annual cash outflow. For example, if the conversion is at a five-year period, the first outflows expected in 2030 are converted to bonds in 2025; then in 2026, enough cash is converted to bonds to match the 2031 expected outflow. This is the same methodology that was used in the 2017 Filing.

## Rates of Return

Note that the portion of the portfolio assigned to growth assets changes over time based on how large expected decommissioning payments will be over the next five years. The updated target asset allocation for the growth assets are shown in the table below:

Portfolio Line Item	2020 Target	Benchmark (BM)
Total Equity	58.0%	Weighted average of equity BMs:
Private Equity	10.0%	Cambridge PE (1Q lagged)

Potential Growth Portfolios are the portfolios of assets that earn an expected rate of return with the lowest risk and the actual choice of the growth portfolio is based on setting the level of risk or return desired. Please note even the growth portion of the portfolio includes some bonds to provide diversification and efficiency. The ‘growth portion’ is not the same as the investment in equities.

The overall expected portfolio returns and volatilities for each plant’s Qualified Trust are given in the table below:

Xcel Energy  
Portfolio AnalysisDocket No. E002/M-20-\_\_\_\_  
Schedule C  
Page 14 of 14**Expected Returns for the Updated Strategy**

Nuclear Unit	60-Year Scenario	
	Operations	Decom.
Monticello	3.80%	3.10%
Prairie Island Unit 1	4.01%	2.80%
Prairie Island Unit 2	3.98%	2.72%

To arrive at the rates of return listed in the table above, the analysis uses different rates of return for bonds and the NDT Growth Portfolio; and the weights assigned to these portfolios change through time. Therefore, expected combined rates of return vary through time; the expected rates included are Single Effective Rates, which are weighted average rates. This expected rate leads to the same final funding level if applied to each of these components that would be obtained by using the actual expected rates.

**Conclusion**

The analysis presented in this Schedule addresses the decisions relating to investment strategy, and contribution strategy.

In terms of investment strategy, GSAM's analysis has led to a recommended asset allocation for the growth portion of the assets that involves equities, fixed income and alternative assets. The portion of the assets required to meet each decommissioning payment is switched from growth assets into bonds five years prior to that payment.

Qualified Trust StatementsDocket No. E002/M-20-\_\_\_\_  
Schedule D  
Page 1 of 1

Schedule E contains the documents required by the Commission to be filed with every submittal. Annually, the Company submits a compliance filing in April. These compliance filings include the Qualified Trust fund activity for the prior year. For example, the 2020 compliance filing made in Docket No. E002/M-17-828 included the Qualified Trust fund activity for 2019. Therefore, this filing only includes the activity for the Qualified Trust since the last compliance filing. The 2020 activity documents the roll forward of the Qualified Trust balances from January 1, 2020 through June 30, 2020.

The June 30, 2020 Qualified Trust balances for the two wholesale jurisdictions have been included in Schedule D.8 as these balances were used to assign 73.4886 percent to the beginning balance used in the accrual calculations. Below is a list of the schedules included.

### **Qualified Trust Analysis, Statements and Balances Supporting Schedules**

---

- D.1 Analysis of Qualified Trust Balances –January - June 2020
- D.2 Trustee Statements – Qualified Trust, Monticello (All Managers, MN Jurisdiction)
- D.3 Trustee Statements – Qualified Trust, Monticello (By Manager, Total Company)
- D.4 Trustee Statements – Qualified Trust, Prairie Island Unit 1 (All Managers, MN Jurisdiction)
- D.5 Trustee Statements – Qualified Trust, Prairie Island Unit 1 (By Manager, Total Company)
- D.6 Trustee Statements – Qualified Trust, Prairie Island Unit 2 (All Managers, MN Jurisdiction)
- D.7 Trustee Statements – Qualified Trust, Prairie Island Unit 2 (By Manager, Total Company)
- D.8 June 30, 2020 Trustee Statements – Qualified Trust, MN and WI Wholesale, All Units
