	PM <sub>10</sub>							0.022699285 tons	

Formula used from AP-42 Section 13.2.1 "Paved Roads"

$$E = k \left( \frac{sL}{2} \right)^{0.91} \left( \frac{W}{3} \right)^{1.02} (1 - P/4N)$$

E = particulate emission factor (having units matching the units of k)

k = particle size multiplier for particle size range and units of interest, From AP-42 Table 13.2-1.1

sL = road surface silt loading (grams per square meter) (g/m<sup>2</sup>), Assume winter time condition

W = average weight (tons) of the vehicles traveling the road

Figure 13.2.1-2 estimates that days of precipitation >0.01 inch per year (P) is approximately 80; N is 365 days.

**Data Request**

1. Construction Year (s)
2. County where construction occurs
3. Total area of disturbance (acres)

4. Staging area size if it is not included in the total area of disturbance (acres)

5. Worker commute round trip mileage broken down for every construction year and average speed of the commute

6. Vehicle used and fuel type for worker commute.

7. Material hauling round trip mileage broken down in every construction year and average speed of the hauling. Diesel assumed for the material hauling trips.

8. Route for worker commute and material hauling.

9. Construction equipment list, including horsepower and hour usage broken down for every construction year

10. Fuel type of the construction equipment.

11. Work Schedule per year

**Response**

2026, 2027 & 2028  
Blue Earth, Goodhue, LeSueur, Olmsted, Rice, Wabasha, Waseca  
4333.23 (acres)

It is anticipated that there will be 5 to 6 yards averaging 10 acres each, spaced at approximately 20 miles and located within 5 miles of the project. For the purposes of this estimate, yards were assumed near the following cities: Mankato, Morristown, Faribault, Kenyon, Rochester, and Plainview.

1. Assume around 45 workers.
2. Assume most of the commutes would be at hwy speeds (55mph) with some slower speeds on smaller roads.
3. Average Commuter Round Trip mileage (one day's mileage): 90mi (2026), 55mi (2027), and 75mi (2028)  
Assume F150 with Gas (not diesel)

1. Assume diesel.

2. Assume most of the commutes would be at hwy speeds (55mph) with some slower speeds on smaller roads.
3. Total material hauling mileage by year: 250mi (2026), 2550mi (2027), and 3650mi (2028)

Assume major roads used: HWY's 35, 66, 60, 13, 56, & 14 with other township roads used as well.

Weeks of equipment usage provided by Hooper have been broken out into construction years based on the percentages of work in each year.

Assume diesel fuel for equipment.

## DEFINITIONS

Agricultural Land	Land that is actively managed for cropland, hay land, or pasture, and land in government set-aside programs.
Environmental / Agricultural Monitor	Monitor retained by the Company responsible for overall project compliance with permit conditions and commitments made in this document. The Environmental/Agricultural Monitor, or Monitor, shall also report directly to the Minnesota Department of Agriculture (MDA) and will be responsible for auditing the Companies' compliance with provisions of this AIMP. The monitor will have demonstrated experience with pipeline or electric transmission line construction on Agricultural Land.
Certifying Agent	As defined by the National Organic Program Standards, Federal Regulations 7 CFR Part 205.2.
Cropland	Land actively managed for growing row crops, small grains, or hay.
The Company	Northern States Power Company, doing business as Xcel Energy. May also include agents and contractors of Northern States Power Company, doing business as Xcel Energy, where appropriate.
Decertified or Decertification	Loss of Organic Certification.
Easement	The agreement(s) and/or interest in privately owned Agricultural Land held by the Company by virtue of which it has the right to construct, operate, and maintain the transmission line together with such other rights and obligations as may be set forth in such agreement.
Final Clean-up	Transmission line activity that occurs after the power line has been constructed. Final Clean-up activities may include: removal of construction debris, de-compaction of soil as required, removal of temporary erosion control structures, final grading, and restoration of fences and required reseeding. Once Final Clean-up is finished, Landowner will be contacted to settle all damage issues and will be provided a form to sign acknowledging final construction settlement.

Landowner	Person(s), or their representatives, holding legal title to Agricultural Land on the transmission line route from whom the Company is seeking, or has obtained, a temporary or permanent Easement. “Landowner” includes Tenant, if any.
Non-Agricultural Land	Any land that is not “Agricultural Land” as defined above.
Organic Agricultural Land	Farms or portions thereof described in 7 CFR Parts 205.100, 205.202, and 205.101.
Organic Buffer Zone	As defined by the National Organic Program Standards, Federal Regulations 7 CFR Part 205.2.
Organic Certification or Organic Certified	As defined by the National Organic Program Standards, Federal Regulations 7 CFR Part 205.100 and 7 CFR Part 205.101.
Organic System Plan	As defined by the National Organic Program Standards, Federal Regulations 7 CFR Part 205.2.
Prohibited Substance	As defined by the National Organic Program Standards, Federal Regulations 7 CFR Part 205.600 through 7 CFR 205.605 using the criteria provided in 7 USC 6517 and 7 USC 6518.
Right-of-Way	The Land included in permanent and temporary Easements which the Companies acquire for the purpose of constructing, operating and maintaining the transmission line.
Subsoil	Soil that is not Topsoil and located immediately below Topsoil.
Tenant	Any Person(s) lawfully renting or sharing land for agricultural production which makes up the “Right-of-Way” as defined in this AIMP.
Tile	Artificial subsurface drainage system.
Topsoil	The uppermost horizon (layer) of the soil, typically with the darkest color and highest content of organic matter.

## INTRODUCTION

Northern States Power Company, doing business as Xcel Energy (Xcel Energy or the Company) developed this Agricultural Impact Mitigation Plan (AIMP) with the Minnesota Department of Agriculture (MDA) in compliance with Minnesota Statutes Section 216E.10, subdivision 3(b). The Mankato to Mississippi River Transmission Project (Project) is an approximately 120 mile 345 kilovolt (kV) transmission line from Xcel Energy’s existing Wilmarth Substation located near Mankato, east to the Mississippi River southeast of Kellogg. In addition to the new 345 kV line, about 20 miles of an existing 161 kV line will need to be relocated from its current location (double circuited with an existing 345 kV line) between the North Rochester Substation near Pine Island and a point on the existing 161 kV line northeast of Rochester because a portion of the new 345 kV line would displace the 161 kV line.

This AIMP identifies measures Xcel Energy will take during construction to avoid, mitigate, minimize, repair, or provide compensation for impacts on cultivated agricultural land. The AIMP and its provisions will be implemented during construction and restoration activities that Xcel Energy undertakes for the Project prior to filing notice of completion of construction with the Minnesota Public Utilities Commission (Commission).

Capitalized words and other defined terms have the meanings given to them in this AIMP and its appendix. Use of “Landowner” in this AIMP may be construed to read “Landowner and/or Tenant.”

This AIMP and its construction standards and policies apply only to construction activities occurring on privately owned Agricultural Land. If agricultural tile is encountered, whether on Non-Agricultural Land or Agricultural Land, Xcel Energy will implement construction standards relating to the repair of tile on Agricultural Lands discussed further in this AIMP. Portions of this AIMP that identify standards and policies as they apply to Organic Agricultural Land apply only to the types of lands defined in the National Organic Program Rules (7 C.F.R. Parts 205.100; 205.101, and 205.202). Further, construction standards and policies identified in this AIMP can be modified through Easement or other agreement between the Company and the Landowner of Agricultural Land, as appropriate. In such case, the Easement or other agreement will control.

## WORKING WITH LANDOWNERS

Xcel Energy will negotiate in good faith with each Landowner of Agricultural Land to secure an agreement containing the conditions or provisions necessary to implement

the provisions of this AIMP. The mitigative actions set forth in this AIMP are subject to negotiation and approval or change by Landowner of Agricultural Land, so long as such changes are negotiated with and acceptable to Xcel Energy. Mitigative actions will be executed by Xcel Energy employees or by qualified contractors retained by Xcel Energy, unless otherwise specified or agreed upon by Landowner. Xcel Energy and Landowner may agree that certain activities will be performed by Landowner.

Unless otherwise specified in this AIMP or in an Easement or other agreement negotiated between the Company and Landowner, construction standards and policies or mitigative actions will be implemented within 90 days after completion of Final Clean-up activities on Agricultural Land. Weather conditions or other circumstances identified by mutual agreement between Landowner and Xcel Energy may delay implementation of mitigative actions after Final Clean-up. Where Xcel Energy determines it is practicable, Xcel Energy may make temporary repairs. These temporary repairs may be made to minimize additional property damage or interference with the Landowner's access to the subject Agricultural Land or to comply with Federal or State permits and regulations.

Xcel Energy or its contractors will implement the construction standards and policies or mitigative actions identified within this AIMP so long as such activities do not conflict with any applicable Federal or State rules, regulations, permits, licenses, approvals, or conditions obtained by the Company for the Project. Should any activity within this AIMP be determined to be unenforceable due to Federal or State rules, regulations, permits, licenses, approvals, or conditions, Xcel Energy will inform the Landowner and will identify a reasonable alternative activity.

Prior to Right-of-Way preparation or construction, Xcel Energy will make a good faith effort to provide each Landowner with contact information, including a phone number and address that can be used to contact Xcel Energy regarding any impacts to Cultivated Agricultural Land or other construction-related concern or question. Xcel Energy will provide updated information to the Landowner within a reasonable time of any change to Xcel Energy's contacts.

Xcel Energy will reasonably restore and/or compensate Landowner, as appropriate, for damages caused by Xcel Energy as a result of transmission line or related facility construction, and as outlined in this AIMP. Xcel Energy will decide whether to restore land and/or compensate Landowner after a discussion with the Landowner.

Xcel Energy will make good faith efforts to provide notice to the Landowner in advance of the commencement of initial construction activities on Agricultural Land. Notice may include personal contact, email, letter, or telephone contact.

## ENVIRONMENTAL/AGRICULTURAL MONITOR

Xcel Energy will hire an Environmental/Agricultural Monitor (Monitor) to act as an independent third party to monitor compliance with this AIMP and other permit conditions/regulatory requirements<sup>1</sup>. Xcel Energy will work with the MDA to select the Monitor.

Xcel Energy will coordinate with the MDA in identifying potential contractors to conduct environmental and agricultural monitoring. Xcel Energy will direct the selected contractor to communicate independently with the MDA and set up a reporting relationship as the MDA instructs.

The Monitor will audit the Company's compliance with this AIMP. While the Monitor will not have the authority to direct construction activities and will not have authority to stop construction, the Monitor will be required to immediately report to Xcel Energy observation of a significant non-compliant activity. The MDA may also instruct the Monitor to report non-compliant activities to the MDA. If after reviewing the non-compliant activity, and if judgement is made that continuing the activity will cause damage to the environment or Cultivated Agricultural Land, Xcel Energy would issue a stop work order.

Specific duties of the Monitor will include, but are not limited to the following:

1. Participate in preconstruction training activities sponsored by Xcel Energy and provide construction personnel with training on provisions of this AIMP before construction begins.
2. Monitor construction and restoration activities on Agricultural Land for compliance with provisions of this AIMP. The Monitor will be allowed full access to the Agricultural Land where construction occurs.
3. Work with construction crews to assure all practices are in compliance with the provisions of this AIMP.
4. Document instances of noncompliance and work with construction personnel to identify and implement appropriate corrective actions as needed.
5. Report instances of noncompliance with the AIMP to Xcel Energy and the MDA.

---

<sup>1</sup> For example, if a Monitor is required to implement other permit requirements (such as a Vegetation Management Plan) Xcel Energy will hire a Monitor that is qualified to conduct compliance monitoring for all such environmental permits, upon review and approval of applicable permitting authorities.

6. Coordinate with the MDA to develop a reporting structure and report directly to the MDA on events or schedule as agreed upon with the MDA.
7. Coordinate communication of Landowner concerns to the MDA, if necessary.
8. Maintain a written log of Landowner concerns observed or reported by Xcel Energy's construction or land rights agents regarding compliance with this AIMP. The written log should record whether the Monitor reported each logged concern to the MDA.
9. Be responsible for determining whether weather conditions have caused the soil to become so wet that mitigation measures designed to alleviate soil compaction would be ineffective and would actually reduce the future production capacity of the land. The Monitor would advise Xcel Energy of these conditions. Xcel Energy will be solely responsible in making the decision on whether it will proceed with construction under these conditions. Compensation for Landowner, as appropriate, will be determined as described in the "Procedures for Determination of Damages and Compensation" section of this AIMP.
10. In disputes between Xcel Energy and a Landowner over restoration, advise the MDA on whether the agricultural restoration is reasonably adequate in consultation with Xcel Energy.

### **Qualifications and Selection of the Environmental/Agricultural Monitor**

The selected Monitor will:

1. Have demonstrated practical experience with pipeline or electric transmission line construction, restoration, and compliance monitoring on Agricultural Land.
2. Have demonstrated practical experience with soils and hydrology in agricultural settings.
3. If work is being performed on Organic Agricultural Land, the Monitor will be trained, in organic inspection, by the Independent Organic Inspectors Association, unless the Monitor received such training during the previous three years.

## **IMPACT AND MITIGATION PRACTICES**

### **Pole Placement**

During the design of the Project, Xcel Energy's engineering, real estate, and permitting staff will seek input from Landowners, as practicable, to address pole placement issues. Prior to construction, Xcel Energy land rights agents will review the planned pole locations with the Landowner when requested to do so by the Landowner.

## **Pole Removal**

If the Project is constructed along an existing transmission line, and Xcel Energy determines the existing facilities can be reasonably co-located, Xcel Energy may remove existing transmission line structures. For transmission line structures that do not have a footing, Xcel Energy will extract the pole from the ground if possible. In the event a pole cannot be extracted by pulling, Xcel Energy will excavate an area and an attempt will be made to extricate an excavated pole entirely. If an excavated pole cannot be removed in its entirety, the pole will either be cut off at the excavated depth (in the range of approximately five feet) or pushed over if the pole cannot be cut. If an existing transmission structure to be removed has a concrete footing, Xcel Energy will work with the Landowner to determine at what depth the footing must be removed so farming operations can continue on the property.

If Xcel Energy removes an existing pole, all support anchors for the structure will be removed. In these instances, Xcel Energy will work with the Landowner to identify any tile lines located near anchors prior to removal of the anchors. Additionally, if any damage to tile occurs as a result of pole or anchor removal, Xcel Energy will adhere to the “Agricultural Tile” section of this AIMP.

## **Agricultural Tile**

Xcel Energy will contact an affected Landowner for his/her knowledge of tile locations prior to installation of the transmission line. Xcel Energy will attempt to identify tile if the Landowner does not know if tile is located at the proposed pole location. Tile that is damaged, cut, or removed as a result of Xcel Energy’s location efforts will be promptly repaired.

If tile is damaged by Project construction, the tile will be repaired with materials of the same quality as that which was damaged. If tiles on or adjacent to the transmission line construction area are adversely affected by construction, Xcel Energy will take such actions as are necessary to restore the tile function, including the relocation, reconfiguration, and replacement of the existing tile. Xcel Energy will correct tile repairs, as needed, after completion of the transmission line construction, provided the repairs were made by Xcel Energy or their agents or designees.

The affected Landowner may elect to negotiate a fair settlement with Xcel Energy for the Landowner to undertake the responsibility for repair, relocation, reconfiguration, or replacement of damaged tile. In the event the Landowner chooses to undertake the responsibility for repair, relocation, reconfiguration, or replacement of the damaged tile, Xcel Energy will have no further liability for the identified damaged tile.

The following standards and policies apply to the tile repairs completed by Xcel Energy:

1. Tiles will be repaired with materials of the same or better quality as that which was damaged.
2. If water is flowing through a damaged tile, temporary repairs will be promptly installed and maintained until such time that permanent repairs can be made.
3. Xcel Energy will make efforts to complete permanent tile repairs within a reasonable timeframe after Final Clean-up, taking into account weather and soil conditions.
4. Following completion of the Final Clean-up and damage settlement, Xcel Energy will be responsible for correcting and repairing tile breaks, or other damages to tile systems that are discovered on the Right-of-Way to the extent that such breaks are the result of Project construction. These damages are usually discovered after the first significant rain event. Xcel Energy will provide the Landowner with contact information should tile damage issues be identified after Final Clean-up. The Company will not be responsible for tile repairs performed by the Landowner.

Xcel Energy will be responsible for repairing areas as necessary to properly drain wet areas along the Right-of-Way caused by the construction of the Project.

### **Excavation/Grading**

Topsoil and Subsoil layers that are removed during construction for facility structures, pole placement, or temporary road impacts will be stored separately and replaced in the proper sequence after the transmission line is installed. Unless otherwise specified in an Easement or other agreement negotiated between the Company and Landowner, Xcel Energy will not use this soil for other purposes, including creating access ramps at road crossings. No Topsoil or Subsoil (other than incidental amounts) may be removed from Agricultural Land without permission of the Landowner.

### **Soil Compaction/Rutting**

Xcel Energy will repair damage incurred due to compaction, ruts, erosion, and/or washing of soil caused by electric line construction. If, by mutual agreement, the Landowner repairs such damage, Xcel Energy will reimburse the Landowner for the reasonable cost of labor and the use of equipment to repair damage incurred due to compaction, ruts, erosion, and/or washing of soil caused by electric line construction. Xcel Energy will make such payments within a reasonable period of time following

completion of project construction and after receiving a statement substantiating the Landowner's repair costs.

If there is a dispute between the Landowner and Xcel Energy as to what areas need to be ripped or chiseled, the depth at which compacted areas should be ripped or chiseled, or the necessity for, or rates of, lime, fertilizer, and organic material application, Xcel Energy will consult with the Monitor prior to making a final decision.

**Excess Soil and Rocks**

Excess soil and rock will be removed from the site unless otherwise requested by the Landowner. After Final Clean-up and restoration of Agricultural Lands, Xcel Energy will make good faith efforts to obtain written acknowledgement of completion of such activities from the Landowner.

**Construction Debris**

Xcel Energy will promptly remove construction-related debris and material which is not an integral part of the transmission line from the Landowner's property at the Companies' cost. Such material may include excess construction materials or litter generated by the construction crews. Xcel Energy will pay for the reasonable cost of repairs to the Landowner's equipment if the equipment is damaged by materials or debris left on the property during construction.

**Procedures for Determination of Damages and Compensation**

Xcel Energy will maintain a procedure for processing Landowner claims for construction-related damages, including but not limited to crop damages. The procedure is intended to standardize and minimize Landowner concerns regarding the recovery of damages, to provide a degree of certainty and predictability for Landowner and the Joint Owners, and to foster good relationships among the Joint Owners and Landowner over the long term. A copy of the procedure will be provided to Landowner during Easement acquisition negotiations.

Damage claim negotiations between Xcel Energy and any affected Landowner will be voluntary in nature. Xcel Energy will offer to compensate Landowners according to the terms of Xcel Energy's damage claim policy in effect at the time the Easement is executed and recorded. The compensation offered is only an offer to settle, and the offer shall not be introduced in any proceeding brought by the Landowner to establish the amount of damages Xcel Energy must pay.

## **Soil Conservation Practices**

Soil conservation practices such as terraces and grassed waterways which are damaged by the transmission line's construction will be restored to their pre-construction condition as near as possible. Xcel Energy will attempt to work with the Landowner to identify and document the pre-construction conditions of these features.

## **Irrigation**

If the transmission line and/or temporary work areas intersect an operational (or soon to be operational) spray irrigation system, Xcel Energy will work with the Landowner to establish an acceptable amount of time the irrigation system may be out of service.

If, as a result of the transmission line construction activities, an irrigation system interruption results in crop damages either on the Right-of-Way or off the Right-of-Way, Landowners will be compensated for resulting crop loss.

If it is feasible and mutually acceptable to Xcel Energy and the Landowner, temporary measures will be implemented to allow an irrigation system to continue to operate across land on which the transmission line is also being constructed. Xcel Energy will not allow an irrigation system to continue operation across land on which the transmission line is also being constructed if Xcel Energy determines that such operation would be unsafe.

## **Access Routes/ Temporary Roads**

The location of access routes to be used for construction purposes will be discussed with the Landowner.

- A. The access routes will be designed so as to not impede proper drainage and will be built to mitigate soil erosion on or near the temporary roads.
- B. If grading is required to create a temporary road, these temporary roads may be left intact through mutual agreement of the Landowner and Xcel Energy unless otherwise restricted by Federal, State, or local regulations.
- C. If a temporary road is to be removed, the Agricultural Land upon which the temporary road is constructed will be returned to its previous use and restored to equivalent condition as existed prior to construction.

## **MITIGATIVE ACTIONS FOR ORGANIC FARMS**

The Companies recognize that Organic Agricultural Land is a unique feature of the landscape and will treat this land with a similar level of care as other sensitive

environmental features. This section identifies mitigation measures that apply specifically to farms that are Organic Certified or farms that are in active transition to become Organic Certified, and is intended to address the unique management and certification requirements of these operations. This section supplements and is in addition to all other protections provided in this AIMP.

The provisions of this section will only apply to Organic Agricultural Land for which the Landowner has provided to Xcel Energy a true, correct and current version of the Organic System Plan within 60 days after the signing of the Easement or 60 days after the first contact by Xcel Energy after the Commission issues a Route Permit, whichever occurs first.

### **Organic System Plan**

The Company recognizes the importance of the individualized Organic System Plan to the Organic Certification process. Xcel Energy will work with the Landowner, the Landowner's Certifying Agent, and/or a mutually acceptable third-party organic consultant to identify site-specific construction practices that will minimize the potential for Decertification as a result of construction activities.

Possible practices may include, but are not limited to: equipment cleaning, planting a deep-rooted cover crop in lieu of mechanical decompaction, applications of composted manure or rock phosphate, preventing the introduction of disease vectors from tobacco use, restoration and replacement of beneficial bird and insect habitat, maintenance of organic buffer zones, use of certified-organic seeds for any cover crop, or similar measures. The Company recognizes that Organic System Plans are proprietary in nature and will respect the need for confidentiality.

### **Prohibited Substances**

Xcel Energy will avoid the application of Prohibited Substances onto Organic Agricultural Land. No herbicides, pesticides, fertilizers or seed will be applied to Organic Agricultural Land unless requested and approved by the Landowner. Likewise, Xcel Energy will avoid refueling, fuel or lubricant storage, or routine equipment maintenance on Organic Agricultural Land. Equipment will be checked prior to entry to make sure that fuel, hydraulic and lubrication systems are in good working order before working on Organic Agricultural Land. If Prohibited Substances are used on land adjacent to Organic Agricultural Land, these substances will be used in such a way as to prevent them from entering Organic Agricultural Land.

## **Temporary Road Impacts**

Topsoil and Subsoil layers that are removed during construction on Organic Agricultural Land for temporary road impacts will be stored separately and replaced in the proper sequence after the transmission line is installed. Unless otherwise specified in the site-specific plan described above, Xcel Energy will not use this soil for other purposes, including creating access ramps at road crossings. No Topsoil or Subsoil (other than incidental amounts) may be removed from Organic Agricultural Land. Likewise, Organic Agricultural Land will not be used for storage of soil from non-Organic Agricultural Land.

## **Erosion Control**

On Organic Agricultural Land, Xcel Energy will, to the extent feasible, implement erosion control methods consistent with the Landowner's Organic System Plan. On land adjacent to Organic Agricultural Land, Xcel Energy's erosion control procedures will be designed so that sediment from adjacent non-Organic Agricultural Land will not flow along the Right-of-Way and be deposited on Organic Agricultural Land. Treated lumber, non-organic hay bales, non-approved metal fence posts, etc. will not be used for erosion control on Organic Agricultural Land.

## **Weed Control**

On Organic Agricultural Land, if Xcel Energy determines weed control is necessary during construction activities, Xcel Energy will, to the extent feasible, implement weed control methods consistent with the Landowner's Organic System Plan. Prohibited Substances will not be used for weed control within 50 feet of posted Organic Agricultural Land. Prohibited substances will not be applied in conditions when winds would carry the substance beyond the 50-foot exclusion area.

## **Monitoring**

In addition to the responsibilities of the Monitor described in the AIMP, the following will apply to Organic Agricultural Land:

- A. The Monitor will monitor weather conditions, as well as construction and restoration activities on Organic Agricultural Land for compliance with the provisions of this section and will document any activities that may result in Decertification.
- B. Instances of non-compliance will be documented according to Independent Organic Inspectors Association protocol consistent with the Landowner's

Organic System Plan, and will be made available to the MDA, the Landowner, the Landowner's Certifying Agent, and to the Company.

**Compensation for Construction Damages**

The settlement of damages will be based on crop yield and/or crop quality determination and the need for additional restoration measures. Xcel Energy will first work with the Landowner of Organic Agricultural Land to determine crop yield. In the event Xcel Energy and the Landowner of Organic Agricultural Land cannot determine crop yield, at Xcel Energy's expense, a mutually agreed upon professional agronomist will make crop yield determinations, and the MDA Fruit and Vegetable Inspection Unit will make crop quality determinations.

If the crop yield and/or crop quality determinations indicate the need for soil testing, the testing will be conducted by a commercial laboratory that is properly certified to conduct the necessary tests and is mutually agreeable to Xcel Energy and the Landowner. Field work for soil testing will be conducted by a professional soil scientist or professional engineer licensed by the State of Minnesota. Xcel Energy will be responsible for the cost of sampling, testing and additional restoration activities, if needed. Additional restoration activities will be completed according to the terms of its damage claim policy in effect at the time the Easement is executed and recorded.

**Compensation for Damages Due to Decertification**

Should any portion of Organic Agricultural Land be Decertified as a result of construction activities, Xcel Energy will pay damages for crops and/or livestock within the area impacted by the lost Certification equal to the full difference between the market value of conventional crops and/or livestock and the market value of the organic crops and/or livestock lost for three years or the period of time necessary for the Landowner or Tenant to regain Certification, whichever comes first. The market value of the crop will be determined as set forth in the damage claim policy. At the request of Xcel Energy, the Landowner shall provide verification of its loss of Organic Certification through the accredited certifying agent prior to any compensation for organic crop loss being paid.

## 1 INTRODUCTION

The Mankato to Mississippi River Transmission Project (Project) is an approximately 120 mile 345 kilovolt (kV) transmission line from Xcel Energy's existing Wilmarth Substation located near Mankato, east to the Mississippi River southeast of Kellogg. In addition to the new 345 kV line, about 20 miles of an existing 161 kV line will need to be relocated from its current location (double circuited with an existing 345 kV line) between the North Rochester Substation near Pine Island and a point on the existing 161 kV line northeast of Rochester because a portion of the new 345 kV line would displace the 161 kV line.

This draft Vegetation Management Plan (VMP or Plan) is intended to describe Xcel Energy's standards for handling of vegetation removal and protection of existing vegetation during site preparation and construction and for revegetation of areas of exposed soil during restoration following Project construction.

Xcel Energy provides this draft VMP for consideration as part of the route permit proceedings currently underway with the Minnesota Public Utilities Commission (Commission).

## 2 GENERAL RIGHT-OF-WAY VEGETATION MANAGEMENT

Xcel Energy's standard practice is to clear all woody vegetation within the full right-of-way width for construction of new transmission lines. This includes cases where a new line will be located within an existing right-of-way such as for a line rebuild or double-circuiting a new line with an existing line. The purpose of clearing to the full extent of the right-of-way is to ensure adequate and safe working spaces for crews during construction as well as to provide appropriate clearances for safe reliable operation of the lines once construction is complete. There are limited circumstances when this practice is modified and selected vegetation can remain within the right-of-way provided National Electric Safety Code (NESC) clearance requirements are met.

While removing woody vegetation within the right-of-way is necessary, efforts are made to protect existing compatible low-growing vegetation to minimize construction impacts such as soil erosion, wetland damage, or habitat loss. The following is a list of general practices that will be used to minimize vegetation impacts related to Project construction:

- Use erosion control best management practices (BMPs) to intercept stormwater runoff from areas disturbed as part of clearing operations. Stormwater BMPs are

addressed in the Project-specific Stormwater Pollution Prevention Plan (SWPPP).

- Minimize rutting by using matting materials in wetland areas for all construction activities, including right-of-way clearing activities; or perform work on firm or frozen ground that can support the equipment used.
- Minimize soil disturbance in steeply sloped areas, to the extent possible and/or practicable.
- Limit construction activities, including vegetation removal, to the right-of-way and off right-of-way access.
- To the extent practicable and safe, limit traffic in the right-of-way between transmission structure locations to a single access path.
- Limit staging and lay-down areas to previously disturbed areas where practicable.
- To the extent practicable, complete construction in wet organic soils when the ground is frozen.
- When existing low growing vegetation is disturbed during construction restoration efforts focus on establishing compatible (low growing) non-invasive species within the right-of-way.

### **3 VEGETATION REMOVAL**

The Project will require the clearing of vegetation within the right-of-way and along temporary construction access paths. Tall woody vegetation that may interfere with safe construction and safe and reliable operation of the transmission line will be removed and managed through the operational life of the Project.

Clearing of vegetation will occur prior to other construction activities as allowed by landowner agreements and permit conditions. Clearing may be accomplished with the use of chainsaws, mowers, and hydraulic tree-cutting equipment. Vegetation will be cut at, or slightly above, the ground surface. Rootstock or stumps will typically be left in place unless transmission structure installation or construction access requires otherwise or at the request of the landowner.

Landowners will be notified to allow them to harvest trees within easement boundaries prior to the initiation of clearing. The landowner will retain the title to all timber material, if desired. Non-merchantable material, including trees, brush, and slash, will be either cut and scattered, placed in windrow piles, chipped, or burned within the right-

of-way. Non-merchantable felled material may also be removed from the right-of-way in a fashion that does not cause erosion unless BMPs are installed.

### **3.1 UPLAND VEGETATION REMOVAL**

The cut and scatter method, where understory trees, branches and brush are simply cut, sectioned into smaller pieces, and scattered across the site, may be used in areas where limited clearing is necessary, and access is challenging. The purpose of this method is to limit the need for unnecessary equipment access and hauling which could potentially disturb existing ground or vegetation.

Woody vegetation may be chipped and scattered over the right-of-way to a maximum depth of one inch in non-agricultural upland areas.

### **3.2 WETLAND VEGETATION REMOVAL**

The use of heavy equipment in wetlands will be kept to the minimum extent practicable. Wetland impact minimization will be accomplished by:

- constructing in wetlands during frozen conditions to the extent feasible;
- working in dry conditions; and
- using low ground-pressure tires or specialized tracked vehicles.

These BMPs are intended to minimize damage to wetland vegetation and soils.

Removal of trees and shrubs from forested wetlands may be necessary in some locations. The removal of woody vegetation within forested wetlands will be conducted in accordance with applicable wetland permit conditions. Within these areas, all trees and large shrub species will be cleared to ground level. Small diameter trees and shrubs (<6" diameter) will be cut and debris scattered in place. Large diameter trees and shrubs (>6" diameter) will be hauled out of wetland areas to suitable upland locations and treated according to applicable procedures. If the cut and scatter method is used within wetland areas no slash material will be left in the wetlands. Chipping or scattering of chips will not occur in wetlands.

Stump removal may occur within wetlands only where stumps interfere with the placement of construction mats or pole locations or pose a risk to construction tires and equipment. Where removal is required for access, stumps will be ground to a point at or slightly below the ground surface using low ground-pressure track-mounted equipment. Woody materials generated by stump grinding may be thin-spread in the wetland; but said material will not be mounded.

## 4 HERBICIDE USE

Herbicides may be used within the right-of-way to control regrowth of woody species, prevent the re-sprout of the stumps of tall-growing tree species or to control invasive or noxious weed species. All herbicide use will be in accordance with manufacturer's specifications and all applicable federal and state regulations. Herbicides designated for upland use will not be used within 75 feet of the vegetative buffer of waterbodies. Herbicides used in or near wetlands and waterbodies must be designed for use in wet areas as designated by manufacturer's specifications and federal and state regulations. Herbicides will not be used on public lands without any required permits/approvals and will not be used at organic farms or other properties where landowners prohibit their use.

The contractor applying herbicide will be required to obtain any necessary permits and/or certifications prior to herbicide placement and will be required to keep proper documentation of location and timing of herbicide use. Treatment shall conform to manufacturers' specifications.

## 5 NOXIOUS WEEDS AND INVASIVE SPECIES CONTROL

Xcel Energy has identified mitigation measures to be implemented to prevent the introduction and spread of noxious weeds and invasive species (NWIS) on lands disturbed by construction activities.

Preventing the introduction of NWIS from outside of the Project area is primarily accomplished by ensuring that, prior to arrival onsite, equipment is cleaned and visible dirt or plant parts are removed using methods such as vehicle washing, high pressure compressed air blowers or brushing. A variety of methods can be used to control NWIS that are already present within the Project right-of-way or access routes. These include completing tree and brush clearing during the winter, treating NWIS infested areas with herbicide prior to start of clearing, spreading mulch along access paths, and routing access paths away from NWIS infested areas.

Winter clearing limits the likelihood of construction equipment coming in contact with NWIS plant parts or seeds and reduces the chances of spreading those parts throughout the right-of-way. Treatment of NWIS areas with herbicides before they are able to go to seed can also minimize spread. If any mulch is used on the Project, it will consist of state-certified weed-free material or mulch derived from onsite locations. The contractor will be responsible for locating and documenting the source of certified weed-free mulch. Copies of the applicable certification documentation must be made available upon request to the appropriate agencies. Mulch derived from onsite locations may be spread up to six inches deep in upland areas to provide ground protection along

access paths. Upon abandonment of access routes, woodchip mulch will be spread evenly to a depth no greater than one inch. No mulch will be spread in wetland locations. Major infestation areas identified during the first growing season will be treated with the use of herbicides or by mechanical methods.

## 6 SEEDING AND REVEGETATION

Revegetation of areas disturbed by construction activities will take place as soon as practicable following construction completion in those areas. Seedbed preparation will be dependent on the site conditions following construction activities and may include tilling to a minimum depth of four inches with a disc, field cultivator, or chisel plow, breaking up large clumps and firming the soil surface. Prior to seeding, prepared beds should be sufficiently soft to allow for seed penetration and mulch anchoring, while sufficiently firm to provide surface soil stability. Seeding and mulching should occur parallel to ground contours as practicable.

In areas where stumps remain within areas of cleared forest, it may not be practical to access large areas of ground with seeding and seedbed preparation equipment. In these areas, smaller vehicles may be required to perform tasks such as smoothing ruts, preparing seedbeds with small rakes, and surface packing after seeding. Fertilizers and other soil amendments are not recommended and will only be applied as requested by and agreed to with landowners.

Because of the linear nature of transmission line projects there are typically many different landcover types and plant communities impacted by Project construction. In cases where there are exposed soils in areas such as roadsides, field edges and other locations dominated by non-native species a Minnesota state seed mix from the 25 series (Non-Native Grassland) will typically be used. These are certified seed mixes which are designed for regional land cover types and meet minimum standards for seed purity, germination rate, weed seed content and pure live seed weight, and are certified as noxious weed free. Seed mixes can be found here: <https://bwsr.state.mn.us/seed-mixes>. In locations where disturbances are within previously undisturbed natural areas which contain native plant species an appropriate native seed mix will be used. On private agricultural lands, agents will work with landowners to develop appropriate measures for reseeded of disturbed soils which may involve planting of row crops. Pastures will be seeded with landowner-specified seed mix.

### 6.1 SEEDING METHODS

Seeding methods may include broadcast, seed drilling or hydroseeding. Broadcast seeding is the most commonly used method for relatively small, disturbed areas, which are typically what is seen in transmission line construction. Seed is uniformly distributed

by a mechanical, hand-operated seeder, or in small seeding areas, by hand. Following seeding, the surface is typically raked with a cultipacker, harrow, or hand rake. The bed is to be firmed as appropriate to site conditions.

Drilled seed will typically be sown at a depth of approximately 0.25 inches; however, some native seed mixes contain small seed which needs to be shallower. If native seed mixes are being installed via seed drill equipment will be able to accommodate and uniformly distribute different sizes of seed at the required depth. Feeding mechanisms will be able to evenly distribute different seed types at the rates specified. Seedbed soil is to be suitably firmed immediately following seed drilling. Seed drilling is only used in areas with a larger disturbance footprint.

Hydroseeding involves applying seed in a broadcast, hydromulch slurry. The hydromulch mix allows the installer to see where application has taken place, ensuring uniform coverage of the seeding area. The hydro-seeder must provide for continuous agitation of slurry and provide for a uniform flow of slurry. This method is not recommended for diverse native seed mixed because of the range of seed sized and necessary planting depths.

When used, native seed mixes are typically most successful when installed between April 1 to June 30, or when soil temperatures have fallen below 55 degrees Fahrenheit in the fall. However, seeding will also be completed outside of those time periods, as areas are ready for revegetation. This is in order to facilitate permanent vegetation cover as soon as possible. Additional seed may be installed in areas where initial seeding is not successful. Temporary seed (oats or winter wheat) may also be applied in those situations as a cover crop.

Temporary seeding of cover crop will occur in locations where unfrozen, bare soil surface conditions and ruts will not be permanently restored within 30 days of completion of active work. Temporary restoration activities will include the repair of rutted surfaces and an even broadcast-seeding of the temporary cover-crop seed mix at a rate appropriate to the cover crop to provide erosion control of the soils. No mulch is to be applied in wetland areas.

## **6.2 NATURAL REVEGETATION**

In many cases natural revegetation by early successional native species following tree clearing is expected to occur. In areas where native species voluntarily revegetate the right-of-way, active restoration and seeding may not be required. Regular monitoring will take place to ensure that NWIS are controlled, that desirable native plant species become the dominant vegetation communities in natural areas, and that bare soils are

quickly stabilized to reduce erosion. In areas of minimal disturbance, vegetation will be allowed to regenerate naturally.

Where standing water is not present, and where surrounding vegetation is dominated by abundant native species, the seeding of bare soils created by rutting, using the temporary cover-crop seed mix may be sufficient for cover while native species revegetate the area.

In areas where wetland plant communities are dominated by native species with rhizomatous root systems that will likely recolonize areas of limited disturbance rapidly, bare soils may be broadcast-seeded with the seasonally appropriate temporary cover-crop. In areas where disturbed and bare soils are sufficient to preclude revegetation from the local, native seed source, a native wetland seed mix will be applied.

## **7 EROSION CONTROL**

In some cases, temporary erosion control methods will be necessary to stabilize soils and give the seed time to germinate. Erosion control measures may consist of anchored straw mulch, hydromulch, wood chip mulch, or erosion control blankets. When used the contractor will be responsible for acquiring certified weed-free mulch. If used erosion control blanketing will be wildlife-friendly non-welded weave in order to minimize impacts to small wildlife. Mulch or blanketing will be required on disturbed, exposed soils on all slopes greater than five percent, and on dry, sandy soils prone to erosion by wind or rain.

If there are locations where seeding is not possible, and there is adequate seed bank present in the soil, temporary stabilization using erosion control matting or mulch will be installed and maintained in a similar manner as in seeded areas. Dormant seeding may be used after soil temperatures have fallen below 55 degrees Fahrenheit when lower temperatures prevent seed from germinating. If dormant seeding is performed, temporary erosion control measures will be installed as indicated in the Project SWPPP.

## **8 MONITORING**

Xcel Energy will monitor and control NWIS within the right-of-way through the construction. The environmental inspector will inspect and provide information regarding infestations of NWIS along the right-of-way to the appropriate agencies. The Permittee will be required to meet easement and lease conditions and obligations and will continue to work with landowners and the appropriate agencies to achieve standards set forth in easement or lease agreements.

The Permittee will monitor areas where seeding and erosion control measures have been implemented and will follow-up with reseeding measures where vegetative cover

by the specified seed mix, or revegetation by the local, native seed source is inadequate to provide long term stability and sustainable native plant communities.

DRAFT
